

TECHNICAL REPORT

MINOR MODIFICATION TO WNOW-FM CONSTRUCTION PERMIT BMPH-20070119ACY

This technical report has been developed in support of a minor modification to the WNOW-FM Channel 287C1 construction permit. Station WNOW-FM was previously granted a change in community of license to Bessemer City, North Carolina at a new transmitter site. In this application, WNOW-FM is remaining at its currently authorized transmitter site and returning to Gaffney, South Carolina, its former and currently licensed community.

Allocations analyses including Longley-Rice prediction of 70 dBu:

Although Station WNOW-FM is not changing its authorized transmitter site, a channel study is provided, as E1, showing clearances to all facilities with the exception of third adjacent Station WKQC on Channel 284C at Charlotte, NC and an application by Station WGOG on Channel 288A.

WNOW-FM and WKQC are pre-1964 grand fathered short-spaced stations, and have been short-spaced since that time. Therefore, this 3rd adjacent channel short-spacing may be ignored in accordance with Section 73.213(a)(4). The existing construction permit at the same site was also granted in accordance with 73.213(a).

The WGOG application specifies contour protection under Section 73.215 with respect to the WNOW-FM CP. Since WNOW-FM is not changing its transmitter site in this application, it does not need to demonstrate contour protection to the WGOG pending application. In addition, WGOG previously changed channels to 288A conditioned on the grant of the WNOW permit (BPH-20080624ABW). Unless WNOW is allowed to remain at its current site, WGOG's earlier channel change to 288A would become invalid and there would be no pending application on Channel 288A to change its community of license at a new transmitter site. Thus, the pending WGOG application should not be an impediment to the WNOW application.

Exhibit E2 demonstrates that the proposed facility provides 70 dBu coverage to Gaffney, SC based on the use of Longley-Rice prediction, and the NED 30 meter terrain

Anderson Communications, LLC

database. Qualification for use of Longley-Rice is established based on a Delta h of 103.5 meters on the 232 radial extending through the center of the city to the far edge of its boundary, and the fact that the predicted mean occurrence Longley-Rice 70 dBu exceeds the FCC predicted value more than 10% on each degree of azimuth across the city. The Delta h determination on the 232 degree radial is documented in E2A, and the Longley-Rice and FCC 70 dBu contours are tabulated in E2B. Mean occurrence Longley-Rice calculations were performed using the V-Soft Probe 3 software and the V-Soft provided NED 30 meter terrain database. Both have been accepted in Commission allocations determinations.

E3 tabulates the service contours, and E3A provides HAAT reference data for all 360 degrees of azimuth based on the use of the NED 30 meter terrain database.

An ERP of 51 kW is proposed based on the HAAT of 395 meters yielding a 60 dBu contour of 72.39 km which rounds to the class maximum of 72 km.

RF Exposure Calculation:

The RF contribution of the 51 kW facility was calculated to be $3.06 \mu\text{Watts}/\text{cm}^2$. This is below the 5% threshold of the maximum permissible $200 \mu\text{Watts}/\text{cm}^2$ exposure for general population/uncontrolled exposure, allowing exclusion from consideration. A worst case vertical (F) factor of .4 was used in the formula (see attached vertical elevation plot) from the OET Bulletin 65:

$$S \text{ (RF in microwatts/cm}^2\text{)} = \frac{33.4 \times F^2 \times (H \text{ ERP} + V \text{ ERP in watts})}{R^2 \text{ (distance to radiation center in meters}^2\text{)}}$$

VI. Conclusion:

It is concluded that the proposed modification to the WNOW-FM construction permit is in full compliance with Commission rules and policies.

Charles M. Anderson
