

Exhibit 25.1

Section 307(b) Study

This application proposes to change the community of license of new Construction Permit WTPG(FM), from CH205A - Weston, OH to CH205B1 – Whitehouse, OH. The following information has been supplied addressing Item 19 (Exhibit 25) of FCC form 340:

(1) If new technical facilities are proposed, the area and population within the proposed 60 dBu contour.

See Exhibit 15.4	Present Operation	Proposed Operation
60 dBu Population	44,924	309,965
60 dBu Land Area	771 km ²	1,497 km ²

	Population	Area
60 dBu Net Gain Area	271,602	1,089 km ²
60 dBu Net Unchanged Area	38,363	408 km ²
60 dBu Net Loss Area	6,288	303 km ²

(2) The number of stations licensed to the proposed new community of license.

There are presently no stations licensed to the new community of Whitehouse, OH. This WTPG.C city of license change would provide the first local aural service to Whitehouse, OH.

There are presently no stations licensed to the formerly authorized WTPG.C community of Weston, OH either. However, it has been understood that Commission policy does not consider a granted, new, un-built Construction Permit to be an existing service as it is presently not on the air and not serving the public. As a result, this city of license change is not viewed as removing any existing service from Weston.

(3) The number of stations providing protected service to the present and proposed service areas.

Summary of Loss Area Service. There are forty-seven (47) service contours which serve in-part or in whole the WTPG.C loss area (inclusive of the unchanged common area). Of these services, twenty (20) contours completely encompass the WTPG.C loss area representing 42.5% of the loss area service floor contributors. The remaining twenty-seven (27) contours only serve the loss area in part representing 57.5% of the loss area service floor contributors. Services to the loss area have been plotted and tabulated in **Exhibit 25.2**.

Summary of Gain Area Service. There are fifty-five (55) service contours which serve in-part or in whole the proposed WTPG.P gain area (inclusive of the unchanged common area). Of these services, seven-teen (17) contours completely encompass the WTPG.P gain area representing 30.9% of the gain area service floor contributors. The remaining thirty-eight (38) contours only serve the gain area in part representing 69.1% of the gain area service floor contributors. Services to the gain area have been plotted and tabulated in **Exhibit 25.3**.

(4) The population (according to the latest Census data) of the proposed community of license.

According to the 2000 Census*, the population of the village of Whitehouse, OH is 2,733.

According to the 2000 Census*, the population of the village of Weston, OH is 1,659.

**The applicant would like to note that 2010 Census community data is not available at present.*

Exhibit 25.1

Section 307(b) Study (Continued)

(5) Where relevant to establish the precondition of a licensable community, a description of the civic, cultural, religious, social and commercial attributes of the proposed community of license.

Whitehouse, OH is an existing village in according to the 2000 Census*. Whitehouse, OH is not located within the Toledo Urbanized Area as noted in **Exhibit 25.4**. Whitehouse, OH is a viable community for licensing purposes as noted in. Information concerning the viability of Whitehouse as a licensable community has been included separately on this Form 340 filing, but is also available via the internet at official Village of Whitehouse, OH website at www.whitehouseoh.com.

**The applicant would like to note that 2010 Census community data is not available at present.*

(6) Any other information deemed relevant.

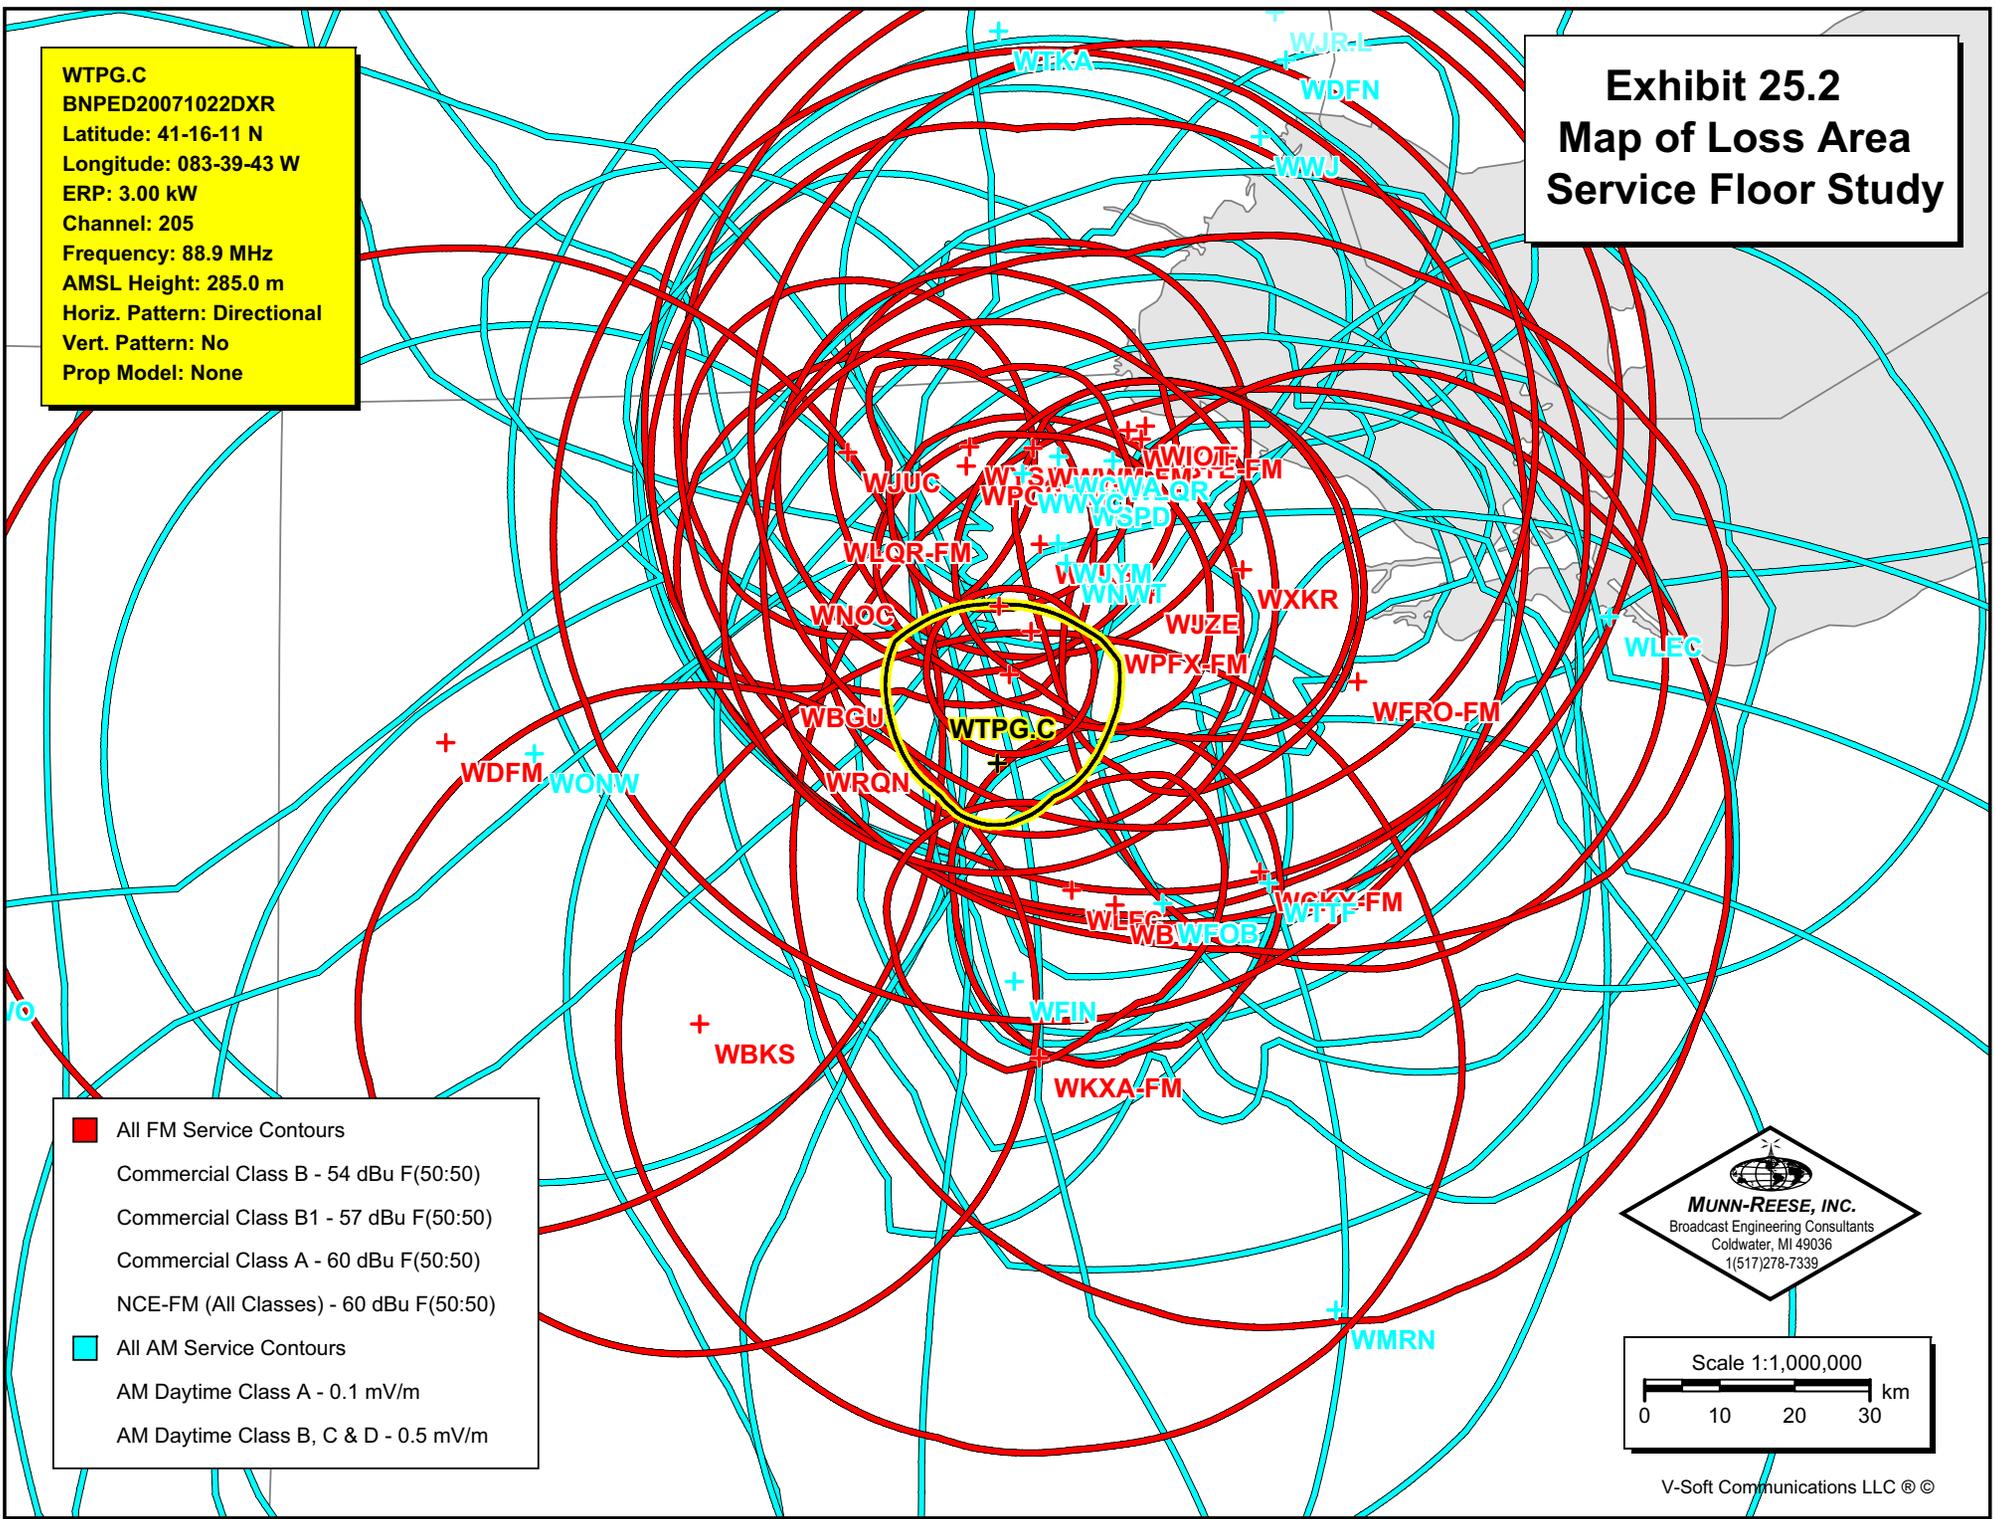

The applicant would like to note that no Tuck Showing is believed required as this proposal will cover less than 50% of the Toledo Urbanized Area with the NCE-FM city grade (60 dBu) service as noted in **Exhibit 25.4**. This proposal will cover no more 45.1% of the Toledo Urbanized Area population or 47.7% of the Toledo Urbanized Area land with NCE-FM city grade service as noted in the exhibit.

Pursuant to the March 3, 2011 release of the FCC's Policies to Promote Rural Radio Service and to Assignment Procedures Second Report and Order, 11-28, MB Docket No. 09-52, the applicant has prepared and submitted this "Rebuttable Urbanized Area Service Presumption Study" as **Exhibit 12.5**. This study has been modeled after the guidelines as set forth in Paragraph 35 and Footnote 97 of the FCC's Rural Radio Second Report and Order. . It is believed that through the showings contained herein and the demonstrated allocation restrictions imposed to towers beyond the affected minor change area, the applicant may certify that there are no viable minor change locations capable of serving the Toledo, OH Urbanized Area with greater than 50% with 60 dBu F(50:50) NCE-FM service.

The applicant would further like to note that also pursuant to, and clarified by the March 3, 2011 release of the FCC's Policies to Promote Rural Radio Service and to Assignment Procedures, applicants were encouraged to supply Priority (4) information including, but not limited to, pertinent public interest showings including the need for further transmission service at the new community, a drop in population justifying the removal of a transmission service at the old community and population growth in areas surrounding the proposed new community that can best be met by a centrally located service. In this instance, from 1980 to 2000, the village of Weston, OH has dropped in population from 1,708 to 1,659 representing a -2.9% decline in population. During this same 1980 to 2000 timeframe, Whitehouse, OH has grown in population from 2,137 to 2,733 representing a 27.9% increase in population; or more than a ten-fold increase in comparison to the Weston village losses. Information concerning the population growth trends for the new community of license and the trends for the decline in population for the former community have been included in **Exhibit 25.6**. This showing includes portions of the U.S. Census 2000 datum for the State of Ohio. Similar growth patterns can also be seen in the areas surrounding the proposed community of Whitehouse, OH. In this instance, the villages of Whitehouse, OH and Waterville, OH are both located within the same Waterville, OH Township as noted in **Exhibit 25.6**. During the 1980 to 2000 time period, both the neighboring Village of Waterville and the inclusive Waterville Township as a whole grew in population from 7,834 to 9,469 representing a 20.9% increase in population for the areas surrounding Whitehouse, OH. It should be noted that neither Whitehouse nor Waterville, OH are presently licensed with an existing aural service, therefore the neighboring community of Waterville, OH will also benefit from this arrangement of allotments.

Rebuttable Urbanized Area Service Presumption Study

Pursuant to the March 3, 2011 release of the FCC's *Policies to Promote Rural Radio Service and to Assignment Procedures* Second Report and Order, 11-28, MB Docket No. 09-52, the applicant has prepared and submitted this "*Rebuttable Urbanized Area Service Presumption Study*". This study has been modeled after the guidelines as set forth in Paragraph 35 and Footnote 97 of the FCC's Rural Radio Second Report and Order.

Paragraph 35 and Footnote 97 state in part that with regard to a Section 307(b), Priority (3) preference, an urbanized area service presumption certification is required to determine if a proposed facility "could be modified" to cover 50% or more of an urbanized area based on all existing towers in the area at the time of filing. Specifically, an applicant will be required to certify that there could be no rule-compliant minor modification on the proposed channel to provide a principal community signal over 50% or more of an Urbanized Area, in addition to covering the proposed community of license. In doing so, proponents will be required to consider all existing registered towers in the Commission's Antenna Structure Registration database, in addition to any unregistered towers currently used by licensed radio stations. Furthermore, all applicants are to consider widely-used techniques, such as directional antennas and contour protection standards when certifying that the proposal could not be modified to provide a principal community signal over the community of license and 50% or more of an Urbanized Area. The Commission acknowledges that while this is not a conclusive test, it is one that will be treated as establishing a rebuttable presumption of an allotment that could not be modified to serve both the majority of an Urbanized Area and the community of license.

Further independent clarification was sought from the Commission as to the standards and practices of this "*Rebuttable Urbanized Area Service Presumption Study*" as the Rural Radio Second Report and Order was not complete in listing the required study parameters. Commission staff did clarify that for NCE-FM purposes, the 60 dBu F(50:50) service contour was to be employed for community and urbanized area coverage purposes. Commission staff clarified that for directional antenna preparation purposes, the 15 dB front to back ratio and 2 dB per 10 degree directional antenna limitations of §73.316 were to be employed. Commission staff clarified that only Urbanized Areas and not Urbanized Clusters need be considered for this study and that at the time of this application filing U.S. Census 2000 Urbanized Area data remains the most recent U.S. Census datum. Commission staff indicated that documentation and supporting showings would be required for this study, however Paragraph 35 and Footnote 97 indicate only a certification to that effect would be necessary. Therefore, out of an overabundance of caution, supporting documentation has been proved. The Commission did not address a clarification request for the use of, or resolution from potential discrepancies resulting from the use of, alternate terrain databases in this study process. Therefore, as the Commission has routinely accepted the use of alternate terrain databases for other allocation protection purposes, and the applicant has employed a uniform use of the NED 03 Second Terrain Database throughout the whole application; use of the NED 03 Second Terrain Database has been employed here as well.

Exhibit 25.5

Rebuttable Urbanized Area Service Presumption Study

To afford compliance with the Rural Radio Second Report and Order, Paragraph 35 and Footnote 97, all towers within the affected minor change area have been studied or addressed. A query of FCC licenses indicates there are no FCC licensed operations on unregistered towers in the affected minor change area, therefore only registered ASR towers within the affected minor change area need be studied. Studies conducted on each noted tower assume an antenna COR mounted at the top of each listed Antenna Structure Registration. It should be noted that this assumption assures a maximum coverage scenario toward the Urbanized Area. However realistically, an actual antenna COR would be mounted much lower on each tower given the likelihood of existing hardware or the need for multiple transmit antenna bays. In all studied cases, custom designed directional antennas were employed. The maximum power for each site was set by the 15 dBu front to back directional antenna ratio imposed by various allocation protections.

It was noted that due to existing 2nd & 3rd adjacent channel allocation restrictions imposed by WYSZ(FM) – Maumee, IN (CH207A); WXUT(FM) – Toledo, OH (CH202A); and WXTS-FM – Toledo, OH (CH202A); all towers within the protected 60 dBu contours of each of these facilities may be categorically eliminated. These 2nd and 3rd adjacent channel protections impose the northern boundary limits of the affected minor change area and have been shaded in red on the master [Exhibit 25.5a](#) map. The eastern boundary limits of the affected minor change area are imposed by the NCE-FM city of license requirement requiring no less than 50% coverage of Whitehouse, OH with 60 dBu F(50:50) service. The towers bordering the eastern limits are noted in orange on the master [Exhibit 25.5a](#) map and fail to cover Whitehouse with 50% of 60 dBu F(50:50) service. Towers further east of these structures will also systematically fail to provide Whitehouse with 60 dBu F(50:50) service and need not be studied further. The north-western boundary limits of the affected minor change area are imposed by the NCE-FM minor change construction permit requirement requiring that the proposed 60 dBu F(50:50) service contour serve at least a portion of the authorized 60 dBu F(50:50) contour. The towers bordering the north-western limits are noted in brown on the master [Exhibit 25.5a](#) map and fail to overlap portions of the authorized WTPG.C 60 dBu F(50:50) contour. Towers further west or northwest of these structures will also systematically fail to overlap the authorized WTPG.C 60 dBu F(50:50) contour and need not be studied further.

The balance of towers studied comprise the southern to western portions of the affected minor change area. Individual studies have been supplied for each of the towers falling within and forming the circumference of the affected minor change area. While these towers can both serve the proposed city of license of Whitehouse with adequate 60 dBu F(50:50) community service and still overlap a portion of the authorized 60 dBu F(50:50) service contour, the resulting services fail to cover more than 50% of the Toledo Urbanized Area. Towers visually serving less than 50% of the Urbanized Area have been denoted in blue on [Exhibit 25.5a](#). No further studies have been provide on towers visually serving less than 50% of the Urbanized Area. Of the towers in the affected minor change area, there are four (4) towers deemed to require further detailed Urbanized Area coverage calculations. These towers included three (3) separate towers and then a maximized directional pattern from the top of this application specified ASR tower No. 1270580. These towers have been denoted in green on [Exhibit 25.5a](#), with the Urbanized Area coverage calculations provided below.

Exhibit 25.5

Rebuttable Urbanized Area Service Presumption Study

As stated before, towers comprising the circumference of the affected minor change area visually cover less than 50% of the Urbanized Area. As towers further south and west of the study area circumference are analyzed, it becomes apparent that relocations to the south and west move closer to co-channel protections WJTA(FM) – Glandorf, OH (CH205A); and WHEI(FM)- Tiffin, OH (CH205A). Physical relocations closer to these co-channel stations require dramatically aggressive directional antenna designs imposing severe reductions in overall power required to maintain the 15 dB front to back directional antenna ratio. These reductions in overall power and physical relocation away from the Toledo, OH Urbanized Area further provide evidence that towers beyond the circumference of the affected minor change area also systematically fail to visually cover more than 50% of the Urbanized Area and therefore need not be studied further.

With regards to the four (4) towers deemed to require actual Urbanized Area calculations, 60 dBu coverage of the Toledo, OH Urbanized Area have been calculated and reported for both land area and population. The methodology for reporting the Urbanized Area coverage values is identical to that used in [Exhibit 25.4](#). This methodology employs the V-Soft®, Probe4™ computer software platform. This platform calculates the Standard FCC Curves F(50:50) contours based on 360 individual radials utilizing the NED 03 Second Terrain Database. As new U.S. Census population data has been made available, U.S. Census 2010 PL population datum has been employed. However as 2010 Urbanized Area boundaries have not been published at the time of this application, U.S. Census 2000 Urbanized Area boundaries have been employed. Individual coverages of the Urbanized Areas, or parts there-of, have been automatically calculated using a Contour Overlap Calculation function integral to the Probe4™ software. The results of the Urbanized Area coverages for the four (4) towers, as well as the application proposal are as follows:

Toledo, OH Urbanized Area	
Total Population:	482,425
Total Land Area:	527.62 km ²

Application Proposal	
UA Population (part):	216,508 (44.88%)
UA Land Area (part):	251.63 km ² (47.69%)

ASR #1270580 (Max)	
UA Population (part):	228,325 (47.33%)
UA Land Area (part):	261.39 km ² (49.54%)

ASR #1019446 (Max)	
UA Population (part):	204,561 (42.40%)
UA Land Area (part):	241.10 km ² (45.70%)

ASR #1055302 (Max)	
UA Population (part):	221,427 (45.90%)
UA Land Area (part):	256.38 km ² (48.59%)

ASR #1013760 (Max)	
UA Population (part):	210,483 (43.63%)
UA Land Area (part):	243.57 km ² (46.16%)

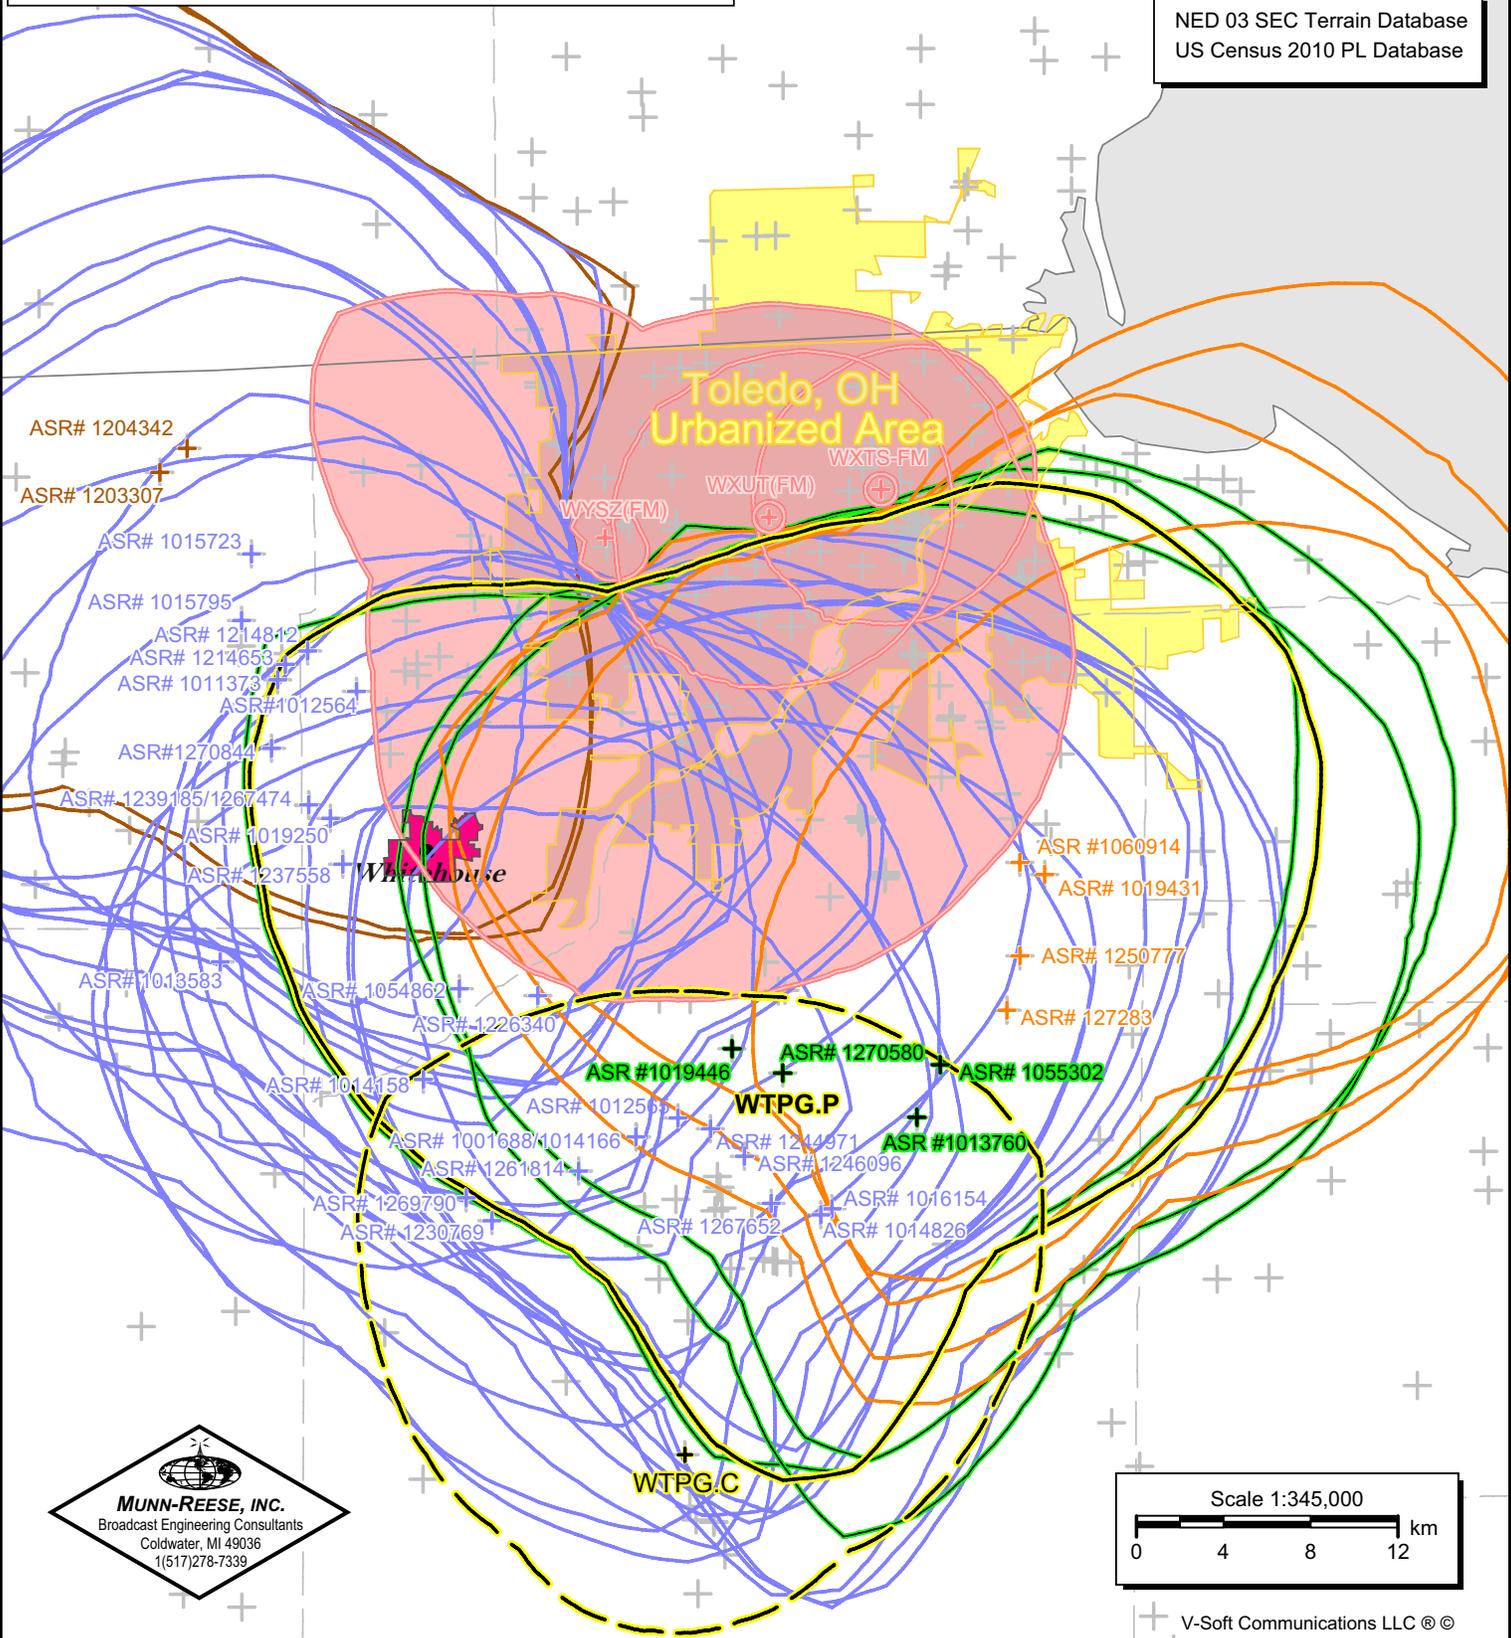

Tabulations of each NCE-FM allocation and each custom directional antennas for the thirty-four (34) individual ASR towers comprising the affected minor change area have been attached in [Exhibit 25.5b](#). These allocation studies represent the maximum allowable operations possible around the circumference and within the affected minor change area for all existing ASR towers and unregistered towers housing FCC licensed aural services. It is believed that through the showings contained here-in and the demonstrated allocation restrictions imposed to towers beyond the affected minor change area, the applicant may certify that there are no viable minor change locations capable of serving the Toledo, OH Urbanized Area with greater than 50% with 60 dBu F(50:50) NCE-FM service.

Exhibit 25.5a Rebuttable Urbanized Area Service Presumption Map

- WTPG.P Proposed 60 dBu F(50:50) Contour (Solid)
- WPTG.C CP 60 dBu F(05:50) Contour (Dashed)
- ASR Towers Serving <50% of Toledo, OH UA (Studies Supplied)
- ASR Towers Visually Serving <50% of Toledo, OH UA
- ASR Towers Not Covering Whitehouse with 60 dBu Service
- ASR Towers Not Service Present CP with 60 dBu Service
- Relocation Preclusion Area (2nd & 3rd Allo Protections)

Special Negotiated Short-Spaced Allotment											

Terrain database is NED 03 SEC , R= 73.215 qualifying spacings or FCC minimum spacings in KM, M= Margin in KM
 Contour distances are on direct line to and from reference station. Reference zone= - Zone 1, Co to 3rd adjacent.
 Ant Column: (D= DA Standard, Z= DA 73.215, N= Not DA 73.215, _= Omni), Polarization (C,H,V,E), Beamtilt(Y,N,X)
 "*"affixed to 'IN' or 'OUT' values = site inside protected contour.
 < = Station meets FCC minimum distance spacing for its class.
 < = Contour Overlap
 Reference station has protected zone issue: Canada

Exhibit 25.6 - Portions of US Census Datum Concerning Weston, OH and Whitehouse. OH

Table 6. Population and Housing Units: 1980 to 2000; and Area Measurements and Density: 2000—Con.

[For information concerning historical counts, see "User Notes." A place or place part is designated as (U) if it has entirely urban land area, as (R) if it has entirely rural land area, or as (U/R) if it has both urban land area and rural land area. An entity shown as entirely urban (U) may have rural water area, which is not included in the total area shown. An entity with land area rounding to less than 0.01 in square miles (shown as "-") has a small amount of land area in square meters (less than 12,949 square meters). Density computed using land area. For information on nonsampling error and definitions, see text]

State Place and [in Selected States] County Subdivision	2000 urban (U) or rural (R) land area	Population			Housing units			2000 area measurements in square miles		2000 average per square mile
