

Environmental Protection

There are two main factors that need to be addressed in order to make sure that the environment around a proposed facility is protected.

1- Significant affects to the environment.

EMF's proposed facility will be constructed on an existing tower (tower ID 1249849) and will cause no adverse effects to the surrounding environment at the site.

2- Human exposure to excess levels of radiofrequency radiation.

The proposed facility is to be built using a 2-bay circularly polarized full wave spaced antenna on the same site as the following:

Call	Channel	Status	City, ST	FIN	Licensee
KLJV	202A	LIC	SCOTTSBLUFF, NE	121887	EDUCATIONAL MEDIA FOUNDATION
K218DL	218D	LIC	SCOTTSBLUFF, NE	106587	EDUCATIONAL MEDIA FOUNDATION

See Exhibit 22-A for antennas that were specified by each licensee/permittee.

As can be seen in Exhibit 22A, the maximum theoretical RF value overall would be 26.32uW/cm² at a distance of 11 meters from the tower, which is 13.16% of the 200 uW/cm² permitted for public (uncontrolled) exposure, and 2.63% of the 1000 uW/cm² permitted for worker (controlled) exposure.

Therefore, the proposed facility complies with the requirements of OET 65.

EMF will fully cooperate with other future site users to temporarily reduce power or cease broadcasting, as necessary, to protect workers and others having access to the site from excessive levels of RF Radiation.
