

W245CB – BMPFT-20130905ACI

Tallahassee. FL.

Application for License.

Condition # 3 Statement

Before

WCVC (AM) 70 Ohms - +j 69

WHBT (AM) 52 Ohms - +j 40

After

WCVC (AM) 70 Ohms - +j 69

WHBT (AM) 52 Ohms - +j 40

Since the antenna system is a grounded skirted tower and W245CB employed a transmission line currently on the tower, no change we noted in the operation of AM stations WCVC or WHBT.

These readings were taken at the antenna tuning unit (ATU) output and the input to the combiner filter section. This is the point where the stations base current metering is located.
