

MINOR CHANGE APPLICATION
REACH COMMUNICATIONS, INC.
W251AL FM TRANSLATOR STATION
CH 251D - 98.1 MHZ - 0.230 KW
FORT MYERS, FLORIDA
July 2012

TECHNICAL STATEMENT

This Technical Statement was prepared on behalf of Reach Communications, Inc. (“RCI”), licensee of FM translator station W251AL, Channel 251D, Fort Myers, Florida. RCI herein proposed to make minor changes in the W251AL facilities by relocating to a new transmitter site. The proposed W251AL facility will rebroadcast the signal of FM station WRXK-FM, Channel 241C, Bonita Springs, Florida. As the proposed W251AL 60 dBu contour is completely encompassed within the 60 dBu contour of WRXK-FM, the proposed W251AL is considered a fill-in translator (Exhibit A).¹ As indicated on Exhibit B, the 60 dBu of the proposed W251AL facility has 60 dBu contour overlap with the 60 dBu of the licensed W251AL translator. Therefore, this application is considered a minor change.

The proposed W251AL antenna system will be located on an existing tower structure that has been registered with the Commission and has been assigned Antenna Structure Registration Number 1032129. Exhibit C is a study demonstrating that the proposed W251AL will not cause interference to any full service station, nor will interference be delivered to or received from any existing FM translator station or LPFM application.

1) The proposed W251AL will rebroadcast the WRXK-FM HD2 channel.

All supporting data used in the preparation of this application has been forwarded to RCI and is available for submission to the Commission upon request.²

2) All data regarding broadcast facilities was extracted from the CBDS database on the date of the interference tabulation. We assume no liability for errors or omissions in that database which may be adverse to the requests contained herein. Only the radiofrequency exposure review of the environmental analysis was undertaken as part of this instant engineering application.
