

**Radio Station WSNR • 620 kHz, Class B • Jersey City, New Jersey**

**Environmental Considerations  
FCC Form 301 §III-A, Question 11.**

An Environmental Assessment is not required, as grant of this application would not be considered a major environmental action. None of the conditions specified in Section 1.1307(a) of the FCC Rules, concerning actions that may have a significant effect on the environment, are believed to apply. Notification has been filed with the FAA; required painting and lighting should be implemented.

The proposed transmitting facilities can comply with FCC guidelines limiting human exposure to radio frequency energy. The applicant intends to conduct measurements of actual RF power density when the site is ready to begin operation and then to construct security fencing at an adequate distance to achieve compliance with FCC guidelines. Tables 1 and 2 in OET Bulletin No. 65 (August 1997), concerning predicted distances from AM towers for compliance with FCC limits, suggest that fences located 2 meters from each tower will prove sufficient.

Warning signs for authorized workers will be posted at the site, with explanatory information about required maintenance procedures. The station should be shut down whenever authorized access is required on the towers themselves.
