

Exhibit 30

FCC 301

CBS Radio East Inc., licensee of KLLC (FM) San Francisco, CA proposes to construct a new auxiliary antenna at NAD 27 coordinates 37 51 03N, 122 29 50W.

The ERI SHPX-4AC-HW-SP 0.5 wavelength spaced antenna will be installed on a 20 meter tower and have a center of radiation 13 meters above ground.

Because of the close proximity of the antenna to the ground, CBS proposes to take RF exposure measurements during the equipment testing phase of the installation.

These measurements will be used to develop an operation plan to prevent excess exposure to humans working at the site.
