

**EXHIBIT E-1**  
**WVEL(AM) – PEKIN, IL**

The instant application seeks to correct the coordinates for radio station WVEL(AM) on 1140 kHz at Pekin, IL. The change is only 4 seconds in latitude or .1 km due north. This change is clearly deminimis in nature, and will not in fact result in any actual change in the interference relationships with any existing station.

Furthermore, the change with respect to most stations is an increase in spacing. Stations experiencing a decrease of .1 km are listed below:

| <b><u>Station</u></b>                | <b><u>Existing distance</u></b> | <b><u>Corrected distance</u></b> | <b><u>Comment</u></b> |
|--------------------------------------|---------------------------------|----------------------------------|-----------------------|
| WISN, Milwaukee, WI<br>1130 kHz      | 271.5 km                        | 271.4 km                         | No overlap            |
| KNEI, Waukon, IA<br>1140 kHz-D       | 335.1 km                        | 335.0 km                         | Rounds to 335         |
| WKWM, Kentwood, MI<br>1140 kHz-D     | 432.3 km                        | 432.2 km                         | Rounds to 432         |
| KCPS, Burlington, IA<br>1150 kHz Day | 130.3 km                        | 130.2 km                         | Rounds to 130         |

It is concluded that the grant of the minor modification to correct the coordinates of WVEL(AM) will not result in any prohibited overlap with existing or protected facilities.
