

Exhibit 11
Edgewater Broadcasting, Inc.
Adjacent Interference
Brewton, Alabama

The Proposed translator on FM Channel 237D with facilities of 4.0 Watts ERP at 139.94 meters AAT is within the 60 dBu contour of station WKSJ-FM on 2nd adjacent Channel 235. The WKSJ-FM contour at the translator site is 62 dBu (F50,50). Based upon the ratio of 100:1 (translator to WKSJ-FM on the lower adjacent channel) the population within the proposed translator 102 dBu is zero. The interference area is calculated by the free space equation to extend 111 meters from the antenna. The antenna is 116 meters above ground level, thus the interference area will never reach the ground. Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
