FEDERAL COMMUNICATIONS COMMISSION  
445 12th STREET, SW  
WASHINGTON, DC 20554  
March 10, 2021

Dear Commission:

After receipt of the Experimental Authority, we turned up the lower sideband (LSB) on the KBKS-FM transmitter (Nautel GV40) by modifying the internal preset to -10dBc (3.7kW) digital effective radiated power (ERP).

This condition was maintained for 30 days and observations by the staff were made with the conclusion that the asymmetric operation was not a success. The sideband was returned to symmetrical when we were required to replace the omni-directional antenna to our transmission system.

During the time of asymmetric operation, no complaints were received.

Sincerely,

A handwritten signature in blue ink, appearing to read "Jeff White".

Jeff White  
Regional Engineering Lead, Seattle Region
