This proposed facility would not have a significant environmental impact since this application is for a channel modification only of an existing facility at an established TV Translator site, accessible by authorized personnel. All users of the site have agreed to lower power or temporarily cease operation when workers may be exposed to high levels of radio frequency radiation. Antennas are at an elevation, above ground, that yields only very low amounts of radio frequency electromagnetic radiation at ground level thereby posing no danger to the general public who may gain occasional access to the site. Additionally, the translators are typically of 10 watts total power output or less.
