

Educational Media Foundation
K281BU, San Francisco, CA

EXHIBIT 16
August 2018

K281BU is located at a site that has more than 50% 60 dBu contour overlap with co-owned FM translator K205BM, Oakland, CA and K277CH, San Francisco, CA. These translators are all fed by KLVS, Livermore, CA. However, K205BM is fed by the primary KLVS signal, K277CH is fed by the KLVS HD-2 signal, and K281BU will be fed by the KLVS HD-3 signal. Therefore these FM translators comply with Section 74.1232(b) in that although there is substantial overlap of the 60 dBu contours they will not be broadcasting the same signal.
