

**ENGINEERING STATEMENT  
RADIO MULTIPLE OWNERSHIP ANALYSIS**

This radio multiple ownership analysis was prepared to consider common ownership of the stations tabulated below.

| Call Sign / Facility ID | Location      | Facilities                 |
|-------------------------|---------------|----------------------------|
| KESC(FM) / 83209        | Okemah, OK    | Channel 279C1 72 kW 282 m  |
| KMCO(FM) / 37777        | Wilburton, OK | Channel 267C1 100 kW 188 m |
| KTMC(AM) / 67593        | McAlester, OK | 1400 kHz 1 kW-D, ND1       |
| KNED(AM) / 37778        | McAlester, OK | 1150 kHz 1 kW-D, DAN       |

The principal community contours of these stations are depicted on a map included herein as Figure 1. Since all of the stations have overlapping principal community contours (5 mV/m for AM stations, 3.16 mV/m for FM stations), an ownership study was prepared in accordance with the Federal Communications Commission multiple ownership rules as outlined in Section 73.3555.

**Radio Market**

The “radio market” applicable to common ownership of the subject stations is defined as the area encompassed by the mutually overlapping principal community contours of the stations proposed to be commonly owned.\* There is one “radio market” defined by the stations tabulated above. The table below lists the defined market:

| Defined Radio Market | Stations that Define Radio Market |                    |
|----------------------|-----------------------------------|--------------------|
|                      | AM Stations                       | FM Stations        |
| Market 1             | KNED(AM), KTMC(AM)                | KMCO(FM), KESC(FM) |

---

\* See Order in Implementation of Section 202(a) and 202(b)(1) of the Telecommunications Act of 1996 (Broadcast Radio Ownership) FCC 96-90, released March 8, 1996 and Memorandum Opinion and Order in Revision of Radio Rules and Policies 7 FCC Rcd 6387, 6395 para. 39 (1992).

Count of Stations in Defined Market

The number of radio stations in a “radio market” is determined by counting the operating stations having principal community contours which overlap or intersect the principal community contours which define the radio market. Only those stations located within 92 kilometers of the perimeter of the mutual overlap area of the respective defined market area were employed in the count of stations. The results of the analysis are tabulated below:

| Defined Radio Market | Number of Stations in the Radio Market |
|----------------------|--|
| Market 1             | 6 AM, 21 FM; 27 Total                  |

Figure 2 is a tabulation of the radio stations identified in the defined radio market. Only known licensed, operating stations were employed for the study. Distances to the AM coverage contours were predicted using the antenna patterns as identified in the Commission’s AM database and the appropriate Ground Wave Field Strength versus Distance Graph of 47 CFR 73.184. Ground conductivity data were obtained from FCC Figure M3. Distances to the FM contours were determined based on the method of 47 CFR 73.313. Terrain data was derived from the U.S.G.S. 3-second computer database for each of the FM stations using radials evenly-spaced every 10 degrees of azimuth.

Based on the above, it is concluded that the proposed combination of the stations to be owned will comply with Section 73.3555(a) of the FCC Rules.
