Technical Report W247BL Minor Modification

This technical report is submitted for a minor modification to W247BL at Ontario, OH, FCC file no. BLFT-20091020ABN. Changes to the COR, antenna, and ERP are requested for the translator to serve as a fill-in to rebroadcast WVNO-FM HD3 291B at Mansfield, OH, FCC facility I.D. 31855.

W247BL Modification Analysis:

An overlap study in exhibit E-1 shows the W247BL modification is within the second adjacent WLRD(FM) 245A protected contour at Willard, OH, FCC facility I.D. 81963. As a result, the interference ratio is utilized to determine the interference contour in accordance with FCC-02-244, paragraph 12. Using the Probe3 software and the NED 30 meter terrain database, the F(50-50) dBu contour was calculated from WLRD(FM) to the W247BL tower site. The resulting F(50-50) contour is 62.80 dBu, and adding the +40 2nd adjacent F(50-10) interfering contour is 102.80 dBu (exhibit E-2).

Since the W247BL modification is located within an area that might cause interference, the vertical elevation pattern of the antenna was used to determine the actual line of sight reduced ERP from the +40 dBu interfering contour within WLRD(FM). Using the V-Soft CONTOUR software, the $F^2 \times \text{kW}$ reduced ERP is used to calculate the actual line of sight distance. From this value, the height above ground of the interfering contour is calculated geometrically relative to the tower site elevation at each degree:

Anderson Associates

Broadcast Consultants
1519 Euclid Avenue
Bowling Green, KY 42103

Height Above Ground = COR AGL - (Line of Sight Distance x Sine(x)),

where (x) is the depression angle from horizontal. Exhibit E-3 shows a tabulation of the actual line of sight distance at each degree from the 102.80 dBu interfering contour to the base of the tower. The lowest height is 6.8 meters above the tower site elevation. An aerial photo of the tower site (exhibit E-4) shows there are no roads or buildings where the W247BL interfering signal would reach any potential listeners within the interfering contour at the minimum calculated height.

The W247BL modification will employ a directional antenna to avoid any interference overlap to WONE-FM 248B at Akron, OH, FCC facility I.D. 43873, shown in the plot and FMOver study in exhibits E-5 and E-6. Exhibits E-7 and E-8 include an interference plot and FMOver study to WBNS-FM 246B at Columbus, OH, FCC facility I.D. 54701, to show the W247BL modification will not produce any interference overlap.

Antenna System:

W247BL will remain at its current tower site, ASR 1013230, at coordinates:

40 45 50N 82 37 04W NAD 27.

A PSI FML-4 0.75 wavelength directional antenna (exhibits E-9 and E-10) will be mounted at a COR AGL of 110 meters, 531 meters AMSL (150 meter HAAT, 30 meter NED terrain), and operate at an ERP of 0.250 kW. The 60 dBu F(50-50) contour overlaps the current W247BL licensed 60 dBu contour and is contained within the primary WVNO-FM HD3 291B 54 dBu contour (exhibit E-11). Since the facility is within the Canadian border zone, exhibit E-12 shows the 34 dBu F(50-10) contour does not reach the border.

Bowling Green, KY 42103

RF Exposure Calculation:

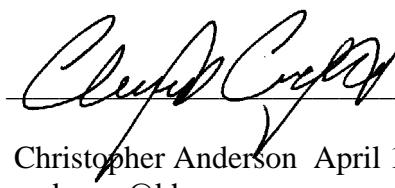

The RF contribution was calculated using the formula from the OET Bulletin 65:

$$S \text{ (RF in microwatts/cm}^2) = \frac{33.4 \times F^2 \times (H \text{ ERP} + V \text{ ERP in watts})}{R^2 \text{ (distance to radiation center in meters -2m)}}$$

Using a worst-case vertical (F) factor of 0.238 from the antenna data, the resulting RF value is $0.081 \mu\text{W}/\text{cm}^2$ to the ground and is well below 5% of the $200 \mu\text{W}/\text{cm}^2$ maximum permissible for general public exposure requiring consideration.

Conclusion:

It is concluded that the modification of W247BL complies with all Commission rules and policies.

Registration Detail					
Reg Number	1013230	Status	Constructed		
File Number	A0015853	Constructed	03/04/1990		
FAA Study	89-AGL-379-OE	EMI	No		
FAA Issue Date	08/21/1989	NEPA	No		
Antenna Structure					
Structure Type	TOWER - Free standing or Guyed Structure used for Communications Purposes				
Location (in NAD83 Coordinates)					
Lat/Long	40-45-50.0 N 082-37-04.0 W	2900 PARK AVE W ONTARIO , OH			
City, State	ONTARIO , OH				
Center of AM Array					
Heights (meters)					
Elevation of Site Above Mean Sea Level	Overall Height Above Ground (AGL)				
420.6	143.9				
Overall Height Above Mean Sea Level	Overall Height Above Ground w/o Appurtenances				
564.5	143.9				
Painting and Lighting Specifications					
FAA Chapters 3, 4, 5, 9					
Paint and Light in Accordance with FAA Circular Number 70/7460-1G					
Owner & Contact Information					
FRN		Licensee ID			
Owner					
MID STATE TELEVISION INC Attention To: GUNTHER MEISSE 2900 PARK AVE W MANSFIELD , OH 44906	P: (419)529-5900 E:				
Contact					
	P: E:				
Last Action Status					
Status	Constructed	Received	02/06/1997		
Purpose	New	Entered	02/07/1997		
Mode	Mail In (Manual)				
Related Applications
