

TELEVISION APOGEO DE TUCSON, L.L.C.  
BT KHRR-DT - Tucson, AZ

EXHIBIT 41A  
Form 301; Section III-D

At an antenna height above average terrain of 621 meters, this application requests a maximum effective radiated power of 411.5 kilowatts, exceeding the 306.2 kilowatt power limit of 47 CFR 73.622. In this instance, attention is directed to the fact that, with electrical beamtilt of  $-1.0^{\circ}$ , effective radiated power at the horizon would be 170.2 kilowatts, well within the limit.

In addition, the attached Exhibit 11B, prepared in conformance with the criteria of O.E.T. Bulletin No. 69, indicates that potential interference (even at the specified maximum power) would not be a factor.
