

EXHIBIT A

ENGINEERING STATEMENT

The engineering data contained herein have been prepared on behalf of KSAZ LICENSE, INC., licensee of Television Translator K25DP, Channel 25, Williams/Ashfork, Arizona, in support of this Application for Construction Permit to specify operation on Channel 43 from its licensed transmitter site. This proposal is being submitted in response to the FCC's assignment of digital television (DTV) Channel 25 to KUSK(TV), Prescott, Arizona, whose site is just 34 miles from that of K25DP, thus placing this translator in a displacement situation.

Since no change in the authorized site or antenna height of K25DP is proposed, no site map or tower sketch is provided herein. It is intended to mount a standard Andrew directional antenna on the existing tower. Exhibit B is a tabulation of terrain and contour data for the proposed facility. These data were used in the preparation of Exhibit C, a map upon which the predicted service contours are plotted.

No change in the overall height or location of the existing structure is proposed,; therefore, the FAA has not been notified of this application.

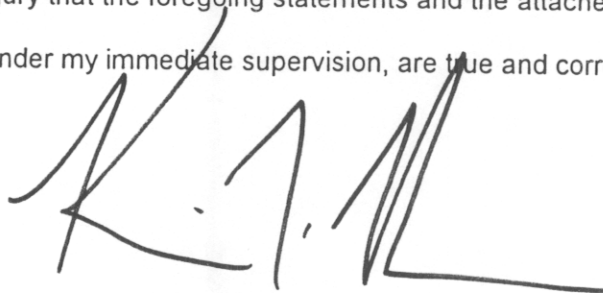

The FCC considers the possible biological effects of RF transmissions in its environmental determinations, so we have studied the matter with respect to this Williams/Ashfork facility. Employing the methods set forth in *OET Bulletin No. 65* and considering a main-lobe effective radiated power of 1.62 kw, an effective antenna height of 14 meters above ground, and the vertical pattern of the Andrew antenna, maximum power density two meters above ground of 0.012 mw/cm^2 is calculated to occur 5 meters north of the tower base. Since this is

EXHIBIT A

but 2.7 percent of the 0.43 mw/cm^2 reference for uncontrolled environments (areas with public access) for a facility operating on Channel 43 (644-650 MHz), this facility may be excluded from consideration with respect to public exposure to nonionizing electromagnetic radiation.

Further, the station owner will take whatever precautions are necessary, such as reducing power or leaving the air temporarily, to ensure that workers operating near the antenna are not exposed to excessive nonionizing radiation.

I declare under penalty of perjury that the foregoing statements and the attached exhibits, which were prepared by me or under my immediate supervision, are true and correct to the best of my knowledge and belief.

A handwritten signature in black ink, appearing to read 'K. T. Fisher', with a stylized, sweeping flourish at the end.
