Re: WCXP-LP, Chicago, IL File No.: BLL-20170913AAM
Facility ID number: 192383

We are notifying you in compliance with 73.1560 of the commission's rules. WCXP-LP Chicago received damage to its antenna and has been operating at variance with our license.

On September 9, 2020, a high level of reflected power was observed at the transmitter. On September 11, a climber checked all connections and it was determined that the fault was at the antenna itself.

The station continued on air with the high reflected power until September 13 when an emergency unipole antenna was installed on the lower roof of the tower site (5320 N. Sheridan Road, Chicago, IL). This is 20 feet below the licensed antenna height.

The input to the antenna is the licensed 18 watts. Polarization is vertical, only. We are working with the antenna manufacturer, Electronics Research, Inc. to make the appropriate repairs.

Sincerely,

Shawn Campbell
General Manager
