

I, Oscar N. Drury, hereby state that I am a Professional Land Surveyor P.L.S. # 2020, licensed by the state of Kentucky.

On August 31, 2011 2020 Land Surveying conducted an "as built" field survey of the directional FM antenna for KMLU, McKee, Kentucky. Method of survey was, Geodetic control set with Topcon Hiper Lite Plus, network rover, and CORS reference station KYTK as base control, to establish the true North azimuth of 271 degrees. The two legs of the tower used for the perpendicular antenna mount were then shot with a Topcon reflectorless Total Station and found to be at right angles to the 271 degrees true north azimuth line, which would correctly orient the installed antenna to 271 degrees true North azimuth.
