

ENGINEERING STATEMENT

The engineering data contained herein have been prepared on behalf of DENVER BROADCASTING, INC., licensee of KDEV-DT, Channel 11, in Cheyenne, Wyoming, in support of its application for Construction Permit for its post-transition digital facility. The instant application specifies a slight increase in effective radiated power (ERP) and a change in the orientation of the authorized antenna. No other changes are specified herein. This proposal is submitted in conjunction with the Commission's lift of the August-2000 "freeze" prohibiting the expansion of a station's service area.

It is proposed to use the licensed directional antenna at the authorized height on an existing 30-meter communications tower. Exhibit B provides the original elevation data for the licensed antenna. Exhibit C is a map upon which the predicted service contours are plotted. The city of license is entirely contained within the 43 dBu contour. An interference study is provided in Exhibit D. A power density calculation follows as Exhibit E.

Because no change in the overall height or location of the existing tower is proposed, the FAA has not been notified of this application. The FCC issued Antenna Structure Registration Number 1224099 to this tower.

I declare that the foregoing statements and the attached exhibits are true and correct to the best of my knowledge and belief.

JEFFREY FISHER
