

## **EXHIBIT 12**

### **Page #1, Waiver Request of Section 74.1204**

New-T, Bozeman, MT 10 Watts ERP

Calvary Chapel of Twin Falls, Inc. 7/03

The proposed site is contained entirely inside the service contour of third-adjacent Station KBMC, Bozeman, MT

#### **KBMC**

The proposed site is contained entirely inside the service contour of third-adjacent Station KBMC, Channel 271, Class C2, 20.5 kW, Bozeman, MT. As shown by the map on **page #2** of this waiver request, the level of the third -adjacent station KBMC arriving protected F(50,50) signal at the proposed transmitter site is 72-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KBMC is 112-dBu (free-space contour method employed). This means that the 112-dBu interfering signal would, in the worst case at the maximum radial, extend 57 meters from the center of radiation, which is proposed at 80 meters AGL. A TOPO Map has been supplied to show that there are no buildings located within this 112-dBu interference contour. Since no population inhabits this 112-dBu interfering area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to third-adjacent channel station KBMC.
