

The mission of the World Peace Through Technology Organization is to inspire world peace. We are a nonprofit organization dedicated to technology education and art; educating people about the world's cultures, and demonstrating the latest in learning and communication technologies.

Our mission is essentially an educational one, and a radio station is a vital educational tool. If properly fostered, communication technologies can be technologies of peace. Whether it be the wheel, the sail, the printing press, the combustion engine, the telegraph, telephone, or computer, all of these advances share one common denominator — they have each facilitated communication, connection, and greater understanding.

By raising awareness and knowledge of each other we are promoting global harmony and peace. The specific purposes for which the World Peace Through Technology Organization is organized are:

1. To inspire world peace through the benevolent uses of technology.
2. To facilitate the evolution of community development between global citizens.
3. To bring technology to the people of the world as part of a humanitarian effort.
4. To prepare an educational mobile gallery called the Peace Tour.
5. To exhibit multimedia showcases in this mobile gallery regarding benevolent technologies.
6. To bring this mobile gallery to people, at various national and international locations, who could benefit from benevolent technologies.
7. To provide educational events, including demonstrations about the use of computers and the Internet, and the creation of art and music.
8. To provide education to enlighten the public about peace, the benefits of using communication and environmentally friendly technologies (such as the Internet, and photovoltaics).
9. To provide computer rebuilds and donations to other non-profit organizations.
10. To provide cultural events, including our annual How Weird Street Fair on Howard Street in San Francisco. The fair turned 14 years old in 2013.
11. To provide a forum for the exhibition of technologically related and inspired art forms, including moving and static sculptures, still and moving visual images, and music.
