

ENGINEERING STATEMENT

The engineering data contained herein have been prepared on behalf of NW COMMUNICATIONS OF TEXAS, INC., licensee of KDFW-DT, Channel 35 in Dallas, Texas, in support of its application for modification of Construction Permit BXPCDT-20100406AAG, an authorization to operate an auxiliary facility. The purpose of this modification is to specify a reduction in effective radiated power from 153 kW to 109 kW. No change in site location, antenna height or antenna azimuth pattern is proposed herein.

It is proposed to utilize the authorized Dielectric directional antenna, which will be mounted at the 330-meter level of an existing 378-meter tower near the present KDFW-DT transmitter site. Exhibit B provides antenna azimuth and elevation pattern data for the authorized antenna. Operating parameters for the proposed facility are tabulated in Exhibit C. Exhibit D is a map upon which the predicted service contours of licensed KDFW-DT and the proposed auxiliary facility are plotted. As shown, the auxiliary's 41 dBu contour is completely contained within that authorized to KDFW-DT. As a result, and since this proposal is for an auxiliary facility, an interference study is not provided. A power density calculation follows as Exhibit E.

It is not expected that the proposed facility would cause objectionable interference to any other broadcast or non-broadcast station authorized to operate at or near the proposed site. However, if such should occur, the owner of this station recognizes its obligation to take whatever corrective actions are necessary.

EXHIBIT A

Since no change in overall height or location of the existing tower is proposed herein, the FAA has not been notified of this application. In addition, the FCC issued Antenna Structure Registration Number 1011406 to this tower.

I declare under penalty of perjury that the foregoing statements and the attached exhibits, which were prepared by me or under my immediate supervision, are true and correct to the best of my knowledge and belief.

PROPOSED OPERATING PARAMETERS

PROPOSED KDFW-DT AUXILIARY
CHANNEL 35 – DALLAS, TEXAS
[MODIFICATION OF BXPCDT-20100406AAG]

Transmitter Power Output: 13.5 kW
Transmission Line Efficiency: 64.3%
Antenna Power Gain – Main Lobe: 12.6 (H), 1.3 (V)
Eff. Radiated Power – Main Lobe: 109 kW (H), 11.3 kW (V)

Transmitter Make and Model: Type-accepted

Transmission Line Make/ Model: Dielectric EIA 50 Ohm
Size and Type: 6-1/8" rigid
Length: 1500 feet

Antenna Make/Model: Dielectric TFU-10DSC/VP-R 4C150 DC
Orientation 0 degrees true
Beam Tilt 1.0 degrees
Radiation Center Above Ground: 330 meters
Radiation Center Above Mean Sea Level: 582 meters

POWER DENSITY CALCULATION

PROPOSED KDFW-DT AUXILIARY
CHANNEL 35 – DALLAS, TEXAS

[MODIFICATION OF BXPCDT-20100406AAG]

Since the FCC considers the possible biological effects of RF transmissions in its environmental determinations, we have studied the matter with respect to this Dallas facility. Employing the methods set forth in *OET Bulletin No. 65* and considering a main-lobe effective radiated power of 109 kW (H) and 11.3 kW (V), an antenna radiation center 330 meters above ground, and the elevation pattern of the proposed Dielectric antenna, maximum power density two meters above ground of 0.00079 mW/cm^2 is calculated to occur 178 meters north of the base of the tower. Since this is only 0.2 percent of the 0.40 mW/cm^2 reference for uncontrolled environments (areas with public access) surrounding a facility operating on Channel 35 (596-602 MHz), a grant of this proposal may be considered a minor environmental action with respect to public and occupational ground-level exposure to non-ionizing electromagnetic radiation.

Further, the station owner will take whatever precautionary steps are necessary, such as reducing power or leaving the air temporarily, to ensure that workers operating in the vicinity of the antenna are not exposed to excessive non-ionizing radiation.
