Quality Broadcast Antenna Systems

**Directional FM Antenna  
WRRO  
Our Lady of Guadalupe Radio, Inc.  
Edon, OH**

A modified PSIFM antenna model with parasitic elements was used in conjunction with the customer's 40' face triangular tower to create the necessary directional radiation pattern. The final antenna consists of three radiating elements each secured to the tower with a pre-installed mounting bracket. The antenna bays are 7/8-wave spaced and there is one horizontal and one vertical parasitic element per bay. The antenna array is center fed from a power divider that provides equal power and phase to each radiating elements.

Pattern testing was performed using a 1/3 scale model element and tower. The azimuth plane measurements were taken on a ground reflection test range. This type of test range utilizes the reflected signal and direct signal from the source antenna to form an interference pattern on the antenna under test. The antenna and tower under test was mounted to a turntable that allowed the structure to be rotated 360° in the azimuth plane. The source antenna was located approximately 75 ft. from the antenna under test. The source height above ground was adjusted to peak the first lobe of the interference pattern at the antenna under test.

The test antenna was mounted in the center of rotation of the turntable. The antenna and mounting structure were rotated clockwise while data was recorded in a counter clockwise direction. All feed cables to the antenna were secured and grounded during pattern measurements. A Hewlett Packard 8753E-network analyzer operating at 269.7 MHz was used as both the source and receiver. The level of the received signal was compared with a standard dipole to establish the directivity of the final pattern. The final pattern measured does not exceed the envelope pattern and is 92.4% of the envelope RMS.

The antenna is to be mounted 94.5 meters (310 ft.) above ground level and positioned 80° True. At this elevation the antenna will be within the allowed +2m/-4m tolerance from the approved 96 meter elevation. No other antenna can be installed within 10 ft. of any radiating element. It is recommended that a broadcast engineer be present to supervise the installation of the antenna and that he or she certifies that the antenna has been installed according to the enclosed instructions.

# Propagation Systems, Inc.

Quality Broadcast Antenna Systems

An input power level of 2.90 kW will be necessary at the antenna input in order to reach the required 15.0 kW ERP. The measured principal minimum at 160 degrees is 1.41 kW, from 260-270 degrees is equal to or less than 1.50 kW and .75 kW at 350 degrees. All minima do not exceed the approved values of 1.5 kW at 160 degrees, 1.7 kW between 260-270 degrees and 1.8 kW at 350 degrees. The transmitter output power requirements are dependent upon the transmission line size and length used to feed the antenna.

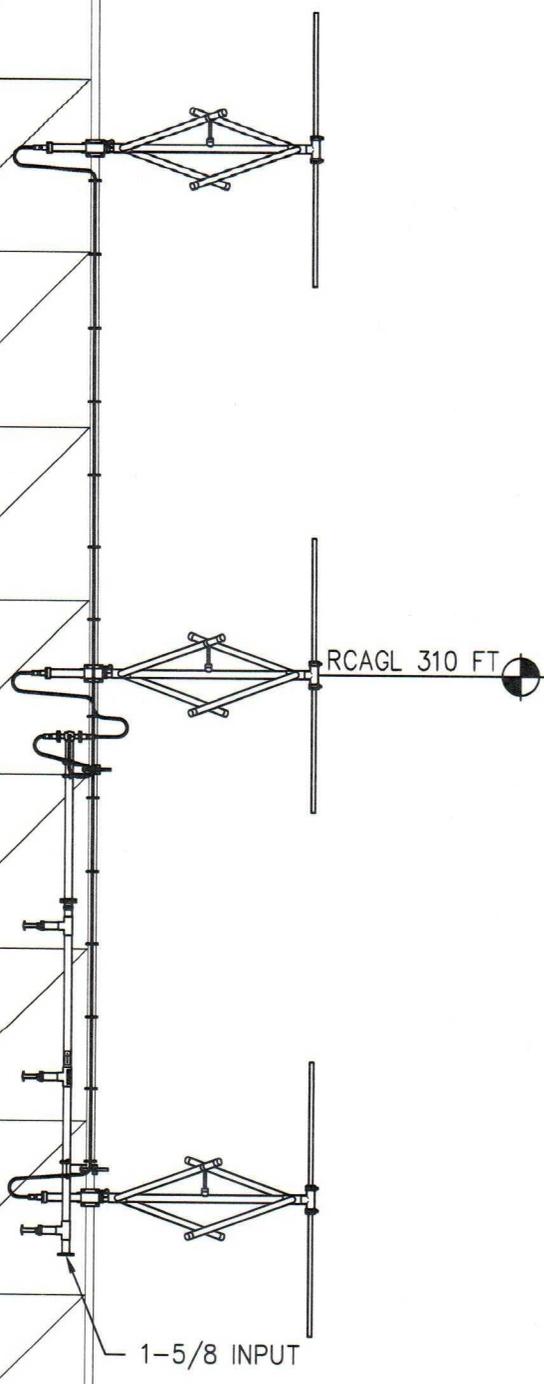

## Antenna Specifications

Antenna Model	PSIFM-3C-875WS-DA
Type	3-bay directional FM antenna
Bay Spacing	7/8-wave spaced elements
Frequency	89.9 MHz
Polarization	Circular
Envelope RMS	.601
Composite RMS	.555
Gain (h-pol)	5.18 (7.14 dB)
Gain (v-pol)	4.10 (6.13 dB)
ERP	15 kW
Antenna input power	2.90 kW
Input	1-5/8" EIA input
Power rating	6 kW
Length	24.2 ft.
Aperture	19.17 ft.
Weight	145 lbs.
Wind Area	14.02 sq. ft.

## Statement of Certification

This is to certify the antenna has been designed, fabricated and tested under my supervision and it meets the required envelope pattern limitations set forth in the stations construction permit.

Douglas A. Ross  
President  
Propagation Systems Inc.

SPECIFICATIONS	
SPACING:	0.875λ
BAY SPACING ('S')	115.0 IN (292 cm)
APERTURE ('A')	19.17 FT (5.8 M)
LENGTH ('L')	24.17 FT (7.4 M)
RCAGL:	310 FT (94.5 M)
WEIGHT:	145 LB (65.8 kg)
WIND AREA:	14.02 FT <sup>2</sup>
POWER RATING:	6 kW
GAIN:	5.18 (7.14 dB)
POLARIZATION	CIRCULAR

NOTE: 1. WEIGHT AND WIND AREA ARE ESTIMATED. WIND AREA IN ACCORDANCE WITH TIA/EIA-222-F Σ(CαAc)  
 2. TIE WRAP COAX. CABLE AT ±16" O.C.
