MODEL 6810-6R

SITE: 1526 INDEPENDENCE LOOP
LEXINGTON, TN 38351

This is a confirmation affidavit of the Shively Labs Model 6810-6R Directional antenna to certify it's proper installation. All construction and mounting methods were followed as outlined by the manufacturer and construction permit parameters. All horizontal parasitic elements were precisely measured and aligned on the interbay sections to insure proper antenna radiation patterns and the entire 6 bay unit was mounted on the 330 degree leg of a J-Crow tower at the precise angle and offset prescribed by Shively Labs documentation.

John Morrow, Site Engineer
WIGH Radio

John Morrow, Manager
J-Crow Tower Works L.L.C.

Qualifications:

John Morrow has operated the J-Crow companies since 1986, providing many towers and antenna installations during that time and is very familiar with Shively Labs product and procedures.
