

## **EXHIBIT 12**

### **Page #1, Waiver Request of Section 74.1204**

Desert Hot Springs, CA K288DR 10 Watts ERP

Calvary Chapel of Twin Falls, Inc. 3/03

The proposed site is contained entirely inside the service contour of third adjacent station KPLM, Palm Springs, CA

### **KPLM**

The proposed site is contained entirely inside the service contour of third adjacent Station KPLM, Channel 291, Class B, 50 kW, Palm Springs, CA. As shown by the map on **page #2** of this waiver request, the level of the third adjacent station KPLM least arriving protected F(50,50) signal at the proposed transmitter site is 91-dBu,. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KPLM least contour is 125-dBu (free-space contour method employed). This means that the 125-dBu interfering signal would, in the worst case at the maximum radial, extend 11 meters from the center of radiation, which is existing at 10 meters AGL. This tower site is located on Edom Hill, an established communications site, in an unpopulated area and a Topo Map is being submitted to show that there are no buildings within this previously authorized interference area. Since there is no population within the 125-dBu interference contour, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to third adjacent channel station KPLM.
