

Somerset, Kentucky Combination

Frequency proposes to acquire the licenses of the following five radio stations which have overlapping principal community contours:

<i>Station</i>	<i>Community</i>	<i>Current Licensee</i>
WKEQ(FM)	Somerset, Kentucky	Capstar
WLLK-FM	Somerset, Kentucky	Capstar
WSEK(FM)	Burnside, Kentucky	Capstar
WSFC(AM)	Somerset, Kentucky	Capstar
WSFE(AM) ¹	Burnside, Kentucky	Capstar

None of these radio stations is located within the geographic boundaries of an Arbitron radio market nor is any of the stations listed by Arbitron as “home” to any ranked market. The principal community contours of these five stations do not overlap those of any other station not listed above in which Frequency holds or proposes to hold an attributable interest. Accordingly, the modified contour overlap methodology is appropriate for this combination.²

As demonstrated in the attached Engineering Statement, this radio market contains nine additional full-power radio stations in which Frequency holds no attributable interest, for a total market of fourteen full power stations. Consequently, Frequency's proposed ownership of three FM stations and two AM station in this market complies with the Commission's local radio ownership rules.

¹ A construction permit has been granted correcting the authorized coordinates of WSFE(AM). Implementation of this construction permit will not affect Frequency's compliance with the local radio ownership rule.

² See 2002 Biennial Regulatory Review – Review of the Commission's Broadcast Ownership Rules and Other Rules Adopted Pursuant to Section 202 of the Telecommunications Act of 1996, *Report & Order & Notice of Proposed Rulemaking*, 18 FCC Rcd 13,620 (2003) (“*Biennial Review*”).

ENGINEERING STATEMENT
RADIO MULTIPLE OWNERSHIP ANALYSIS
SOMERSET, KENTUCKY

This radio multiple ownership analysis was prepared to consider common ownership of the stations tabulated below under the FCC “Interim” contour analysis method. * GoodRadio.TV License, LLC. is acquiring several radio stations in the Somerset, Kentucky area. Below is a tabulation of facilities for each station.

Call Sign / Facility ID	Location	Facilities
WKEQ(FM)/21624	Somerset, KY	CH 246C2 27.5 kW 201 M
WLLK-FM/72780	Somerset, KY	CH 272A 6 kW 100 M
WSEK(FM)/37027	Burnside, KY	CH 230C2 50 kW 150 M
WSFC(AM)/21626	Somerset, KY	1240 kHz 0.79 kW-U ND-1
WSFE(AM) (Licensed)/37024	Burnside, KY	910 kHz 0.43 kW-D ND-1
WSFE(AM) (CP)/37024	Burnside, KY	910 kHz 0.43 kW-D ND-1

The principal community contours of these stations are depicted on a map included herein as Figure 1. Since the principal community contours (5 mV/m for AM stations, 3.16 mV/m for FM stations) of some of the stations are involved in mutual overlap, an ownership study was prepared in accordance with the Federal Communications Commission multiple ownership rules as outlined in Section 73.3555.

* See Report and Order and Notice of Proposed Rulemaking, MB Docket 02-277, FCC 03-127, Released July 2, 2003.

Radio Market

The “radio markets” applicable to common ownership of the subject stations are defined as the areas encompassed by the mutually overlapping principal community contours of the stations proposed to be commonly owned. The table below lists the defined radio market:

Defined Radio Market	Stations that Define Radio Market	
	AM Stations	FM Stations
Market 1	WSFE\WSFC	WKEQ\WLLK\WSEK

Count of Stations in the Defined Market

The number of radio stations in a “radio market” is determined by counting the operating stations having principal community contours which overlap or intersect the principal community contours which define the radio market. Only those stations located within 92 km of the perimeter of the mutual overlap area of the defined market area were employed in the count of stations. Commonly owned stations were not considered in the count of stations in the defined markets. The results of the analysis are tabulated below:

Defined Radio Markets	Minimum Number of Other Stations in the Radio Market
Market 1	4 AM, 5 FM; 9 Total

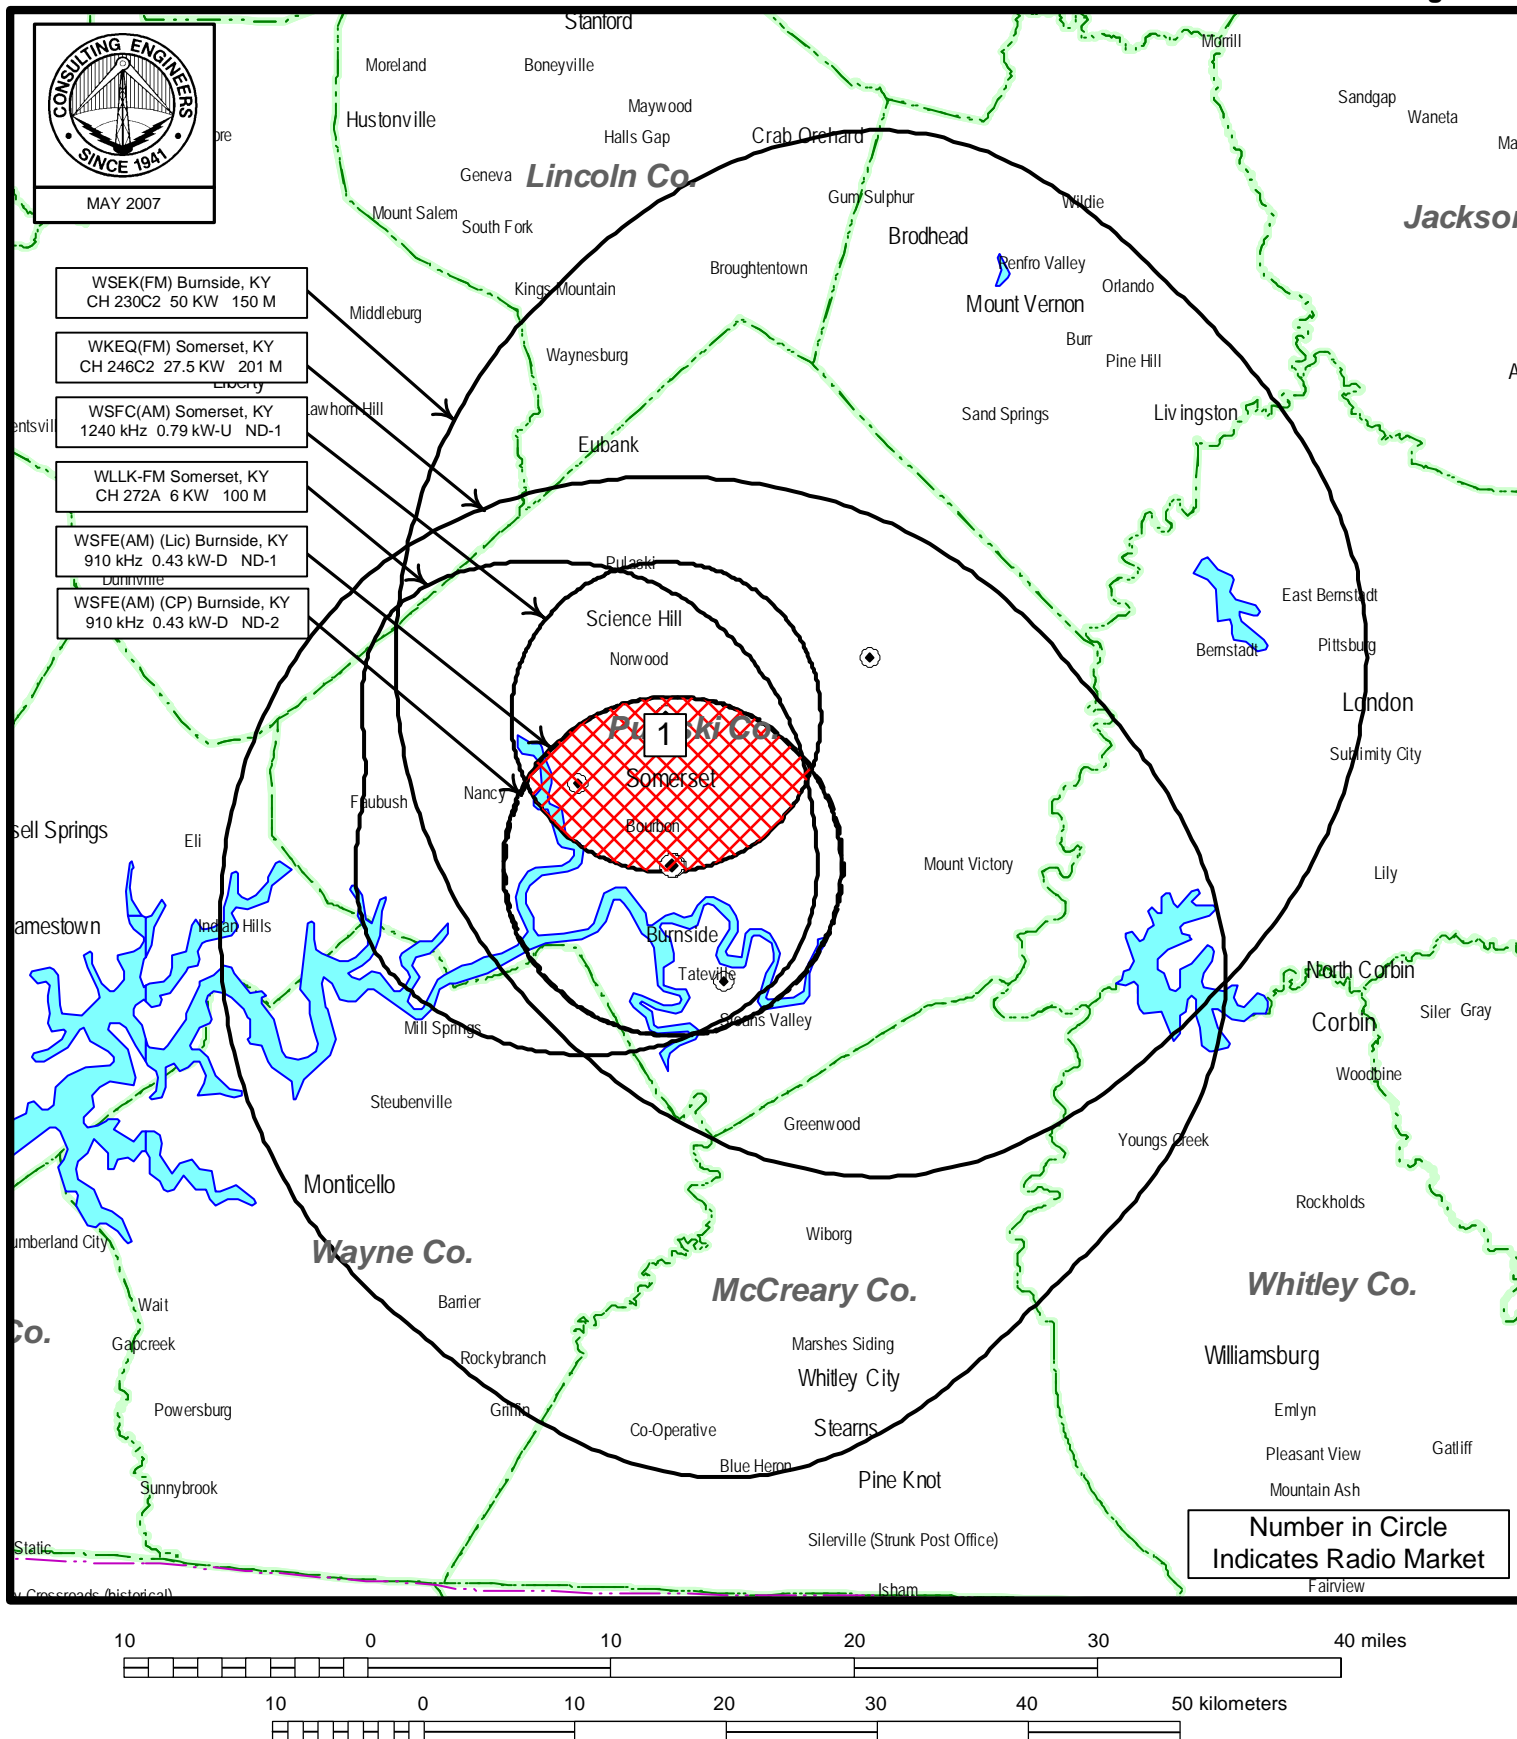

Figure 2 are tabulations of the radio stations identified in the defined radio market. Only known licensed, operating stations were employed for the study. Distances to the AM coverage contours were predicted using the antenna patterns as identified in the Commission's AM database and the appropriate Ground Wave Field Strength versus Distance Graph of 47 CFR 73.184. Ground conductivity data were obtained from FCC Figure M3. Distances to the FM contours were determined based on the method of 47 CFR 73.313. Terrain data was derived from the N.G.D.C. 30 second computer database for each of the FM stations using radials evenly-spaced every 45 degrees of azimuth.
