

EXHIBIT 12

Page #1, Waiver Request of Section 74.1204

K201DR, Sun Valley, NV 34 Watts
Calvary Chapel of Twin Falls, Inc. 2/04

The proposed site is contained entirely inside the service contour of second-adjacent Station, KLRH, Sparks, NV

KLRH

The proposed site is contained entirely inside the service contour of second-adjacent Station KLRH Channel 202, Class C1, 1.78W, Sparks, NV. As shown by the map on **page #2** of this waiver request, the level of the least contour of second-adjacent station KLRH, which is the station's least arriving protected F(50,50) signal at the proposed transmitter site is 70-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KLRH is 110-dBu (free-space contour method employed). This means that the 110-dBu interfering signal would, in the worst case at the maximum radial, extend **132 meters** or **.132 km** from the base of the tower. It is evident that there is no population within .132 km of this tower site and therefore no population that will be affected on this antenna communications site, as noted by the specified section of the 7.5 min Topo Map Reno, NV, which is being submitted showing a .3 km area circled around the tower. Since no population inhabits this 110-dBu interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station KLRH.
