NATURE OF THE PROPOSAL
ALLOCATION CONSIDERATIONS
prepared for
Guaranty Broadcasting Company of Houma, LLC
KCIL(FM) Houma, Louisiana
Facility ID 25520
Ch. 298C1 69 kW 198 m

Guaranty Broadcasting Company of Houma, LLC (“*Guaranty*”) is the licensee of station KCIL(FM), Channel 298C1, Houma, Louisiana, Facility ID 25520 (FCC File Number BLH-19850617KJ). *Guaranty* holds a Construction Permit (“CP,” FCC File Number BPH-20010625ABD) to reduce the Station Class of KCIL(FM) to Class C2. An application for license to cover that CP (FCC File Number BLH-20040120ADD) has been accepted for filing by the Commission. The downgrade was initiated by the applicant in order to allow co-owned station WTGE(FM), Channel 297A, Baker, Louisiana to obtain a Construction Permit (FCC File Number BPH-20010625ABB) for a new transmitter site. The instant proposal seeks to obtain a “one step” upgrade to reinstate the original Class C1 status of KCIL(FM), and to operate pursuant to Section 73.215 of the FCC Rules with respect to the WTGE(FM) CP. The proposed KCIL(FM) Class C1 facility will operate at the present existing KCIL(FM) transmitter site, with an effective radiated power (“ERP”) of 69 kW and the existing antenna height above average terrain (“HAAT”) of 198 meters. The KCIL(FM) antenna is located on a tower that has been registered with the Commission (Antenna Structure Registration Number 1226871).

The principal community of Houma is encompassed by the KCIL(FM) proposed 70 dBμ coverage contour. The attached **Exhibit 25 - Figure 1** supplies a coverage contour map for the proposed facility.

The proposed facility meets the minimum distance separation requirements of Section 73.207 of the Commission’s Rules with respect to all other stations, allotments, and proposals, as contained within the Commission’s CDBS database except with respect to the aforementioned WTGE(FM) CP. An allocation spacing summary table is provided as **Exhibit 25 - Table 1**.

Exhibit 25 - Statement A
NATURE OF THE PROPOSAL
ALLOCATION CONSIDERATIONS
(Page 2 of 2)

The proposed “one-step” allotment coordinates are located approximately 40 km east of the KCIL(FM) transmitter site. A maximum Class C1 facility at this site would provide 70 dBμ principal community coverage of Houma. An allocation spacing summary table with respect to the one step allotment site is provided as **Exhibit 25 - Table 2**.

Regarding the proposed short-spacing to WTGE (CP), processing under Section 73.215 of the Commission’s Rules is hereby respectfully requested. Attached as **Exhibit 25 - Figure 2** is a depiction of the pertinent protected and interfering contours for the proposed station and the WTGE(CP) facility. **Exhibit 25 - Figure 2A** shows a detailed view of these contours at a larger scale. Class A maximum ERP and HAAT were employed for WTGE, pursuant to Section 73.215.

The proposed site is located over 320 km from the U.S. - Mexican and U.S. - Canadian borders, so no international coordination is required. The nearest FCC monitoring station is 734 km distant at Kingsville, Texas. This distance exceeds by a great margin the threshold minimum distance specified in §73.1030 that would suggest consideration of the monitoring station. There are no AM broadcast stations within 3.2 km (2 miles) of the proposed site, according to information extracted from the Commission’s engineering database.

It is thus believed that the facility proposed herein satisfies all of the pertinent Commission Rules and Policies now in effect regarding allocation matters.
