

**November 2008
New FM Channel 205A
Baseline NCE Service Study**

A study has been made of the baseline (i.e. existing) NCE service provided to areas within the 60 dBu contour of the proposed NCE FM facility. Population counts are per the 2000 Census, using the block centroid method. The results of that study indicate that the following existing stations provide protected NCE service to this area, as depicted on the attached map exhibit:

Callsign	Channel	Community
KUGS	207A	Bellingham
KMWS	209A	Mount Vernon
KSVR	219A	Mount Vernon
KSER	214A	Everett

The following table lists the population served by the proposed facility, along with the populations which will receive their first and/or second NCE service.

Proposed	June 2008 Population	November 2008 Population
60 dBu	89,641	96,630
1 st NCE Service	20,909 23%	20,688 21%
2 nd NCE Service	18,901 21%	19,867 21%
1 st +2 nd NCE Service	39,810 44%	40,555 42%

Please note that figures are shown for both the June 2008 amendment to BNPED-20071018ARZ, and the instant November 2008 amendment. It is understood that the lower figure in each row would be used for comparative purposes, should this application be evaluated as part of an MX group.
