Engineering Certification for Directional Antenna at WXAF-FM at Malden Mtn, near Charleston, WV. Construction Permit, File # BMPED-20140102AQO.

On December 7th, 2013, I observed the installation of a directional PSI antenna, model PSIFML-4A-DA, on a tower for WXAF-FM. The tower is located at 38-16-58N and 081-31-52W and it's FCC ASR number is 1033973.

The antenna was installed following the manufacturer's instructions.

I also verified the placement of the antenna on the tower, and the orientation of the bays to be in compliance of the Construction Permit. I have worked with this rigging crew on other tower jobs, over the past 15 years, that has required their expertise in the installation of directional broadcast and communications antennas.

I have been the Chief Engineer for West Virginia Radio Corp in Charleston WV, for the past 6 years and before that I worked for 27 years in the field of installation of Public Safety Radio Systems throughout the state of WV.

Regards,
