November 25, 2008

In evaluating the proposed digital flash cut for W15BU FID 66983, an outgoing interference study was executed on the proposed design in the attached application using the OET-69 Longley Rice methodology. The stations listed in the table below showed possible interference. When these stations were evaluated for outgoing interference, there was zero percent interference present found in each case when rounded to the nearest whole percent. Attached below is a coverage map showing the original CP coverage and the proposed coverage.

Callsign	Fac ID	ARN	City	Class	Overlap Pop%
