Attn: Don Perkins--Chief Engineer

Dear Mr. Perkins:

This letter will serve to fulfill one of the conditions in the WLTB construction permit number BPH-20050826AAA to locate its antenna on the existing FOX 40 tower, ASR # 1065310 located at 3000 Ingraham Hill Rd.

Operating with nighttime parameters during the daytime will reduce our coverage area and cause a financial burden to WNBF. Therefore we do not wish to operate with nighttime facilities during the daytime for the purpose of making antenna measurements.

Further, in the recent past WMXW was removed from the FOX 40 tower. Before and after measurements were made at the time of that construction demonstrating there was no adverse affect on the WNBF antenna pattern. The WLTB antenna and line are in essence a direct replacement of the WMXW system. Therefore, we believe the installation of the WLTB antenna on the FOX 40 tower will have no adverse affect on our facility and respectfully decline participating in antenna measurements on WNBF.

Sincerely,

Rick Elliker  
Chief Engineer--WNBF
