ENGINEERING STATEMENT "Market 1"

This firm was retained to determine the number of principal community radio contours available from stations authorized for commercial service within the radio market defined by the principal community contours of KJSK(AM), Columbus, NE, KLIR(FM), Columbus, NE, KTTT(AM), Columbus, NE, KKOT(FM), Columbus, NE, and KZEN(FM), Central City, NE.

The existing facilities of the stations included in this report were determined by the use of currently updated copies of the FCC computer databases of AM and FM stations. The listed facilities served as the basis for the computation of the respective principal community contours as defined in §73.3555 (a)(3)(i) of the Rules. The accuracy of the results of this study is understood to be limited to the accuracy of these databases. The FCC databases give no indication of licensed facilities that may be inoperative, construction permit facilities that may now be operating under program test authority (but have not yet been issued a license), facilities that may have been licensed since the last update, or non-commercial stations operating within the AM band. Therefore, some stations may have been included or excluded erroneously. However, unless otherwise indicated, all licensed facilities known to be inoperative and all known non-commercially licensed stations, as well as application and construction permit facilities, have been eliminated from consideration in this study.

For AM stations, Map M-3 soil conductivity values and the authorized licensed transmitting facilities served as the basis for the computation of the predicted 5.0 mV/m groundwave contour in accordance with §73.183 of the FCC Rules. The distance to the contour was computed for seventy-two (72) equally spaced azimuths beginning with 0° True. For FM stations, the authorized Center of Radiation and ERP values were utilized to compute the predicted 3.16 mV/m (70 dBu) contour as provided in §73.313 of the Rules. The predicted FM contours shown in this report are based on the use of 72 equally spaced terrain radials beginning with 0° True.

The radio market has been defined, in accordance with §73.3555 (a)(3)(ii) of the FCC Rules, as the area within the total perimeter formed by the combined principal community contours of KJSK(AM), KLIR(FM), KTTT(AM), KKOT(FM), and KZEN(FM). **Figure 1** shows only the five (5) contours on a map indicating the boundaries of the defined radio market area. To aid in identifying the respective contours, AM contours have been shown with red lines, and FM contours have been shown with black lines. **Figure 1A** is a map showing all stations under common control.

These market defining contours are also shown in **Figure 2** and **Figure 3** of this report along with the other principal community contours entering the market. The market defining contours have been shown with green dashed lines on these maps. The other AM contours have been shown in **Figure 2** with solid red lines, and the other FM contours have been shown in **Figure 3** with solid black lines.

In addition to the stations defining the market area, the principal community contours of the thirteen (13) other AM stations and twelve (12) other FM stations entering the market are shown in **Figures 2** and **3**, respectively. Including the five (5) stations which define the market area, there is a total of thirty (30) aural services in this market.

This market was analyzed under the guidelines of NPRM, MM Docket No. 00-244. This rulemaking proposes the exclusion of stations under common ownership, operation, or control from entering the market. Stations under common control, which help define the market, may continue to be counted. Two (2) AM Stations and one (1) FM station under common control must be excluded from the market. Under NPRM, MM Docket No. 00-244, the principal community contours of eleven (11) other AM stations and eleven (11) other FM stations enter the market. Including the five (5) stations which define the market area, there is a total of twenty-seven (27) aural services in this market. Thus under the proposed rules, the market falls within the limitations set forth in §73.3555(a)(1)(iii) for markets in which six stations, not more than four of which are in the same service, can be under common control. **Figure 4** lists the facilities of the individual stations used in this report.

CERTIFICATION

I hereby certify, subject to penalties for perjury, that the contents of this Engineering Statement are true and accurate to the best of my knowledge and belief.
