

Directional FM Antenna

WYGG

Minority Business & Housing Development, Inc.

Asbury Park, NJ

July 30, 2018

A custom designed model PSIFLV-2A-DA, a vertical polarized dipole antenna, was used in conjunction with the customer's support mast and triangular tower to create the necessary directional radiation pattern. The final antenna consists of two radiating elements each with two parasitic elements. The dipole radiator attaches to a support mast with an integral mounting bracket that was pre-attached at the factory.

Pattern testing was performed using a 1/3 scale model element and tower. The vertically polarized azimuth plane measurements were taken on a ground reflection test range. This type of test range utilizes the reflected signal and direct signal from the source antenna to form an interference pattern on the antenna under test. The antenna and mounting structure under test was mounted to a turntable that allowed the structure to be rotated 360° in the azimuth plane. The source antenna was located approximately 75 ft. from the antenna under test. The source height above ground was adjusted to peak the first lobe of the interference pattern at the antenna under test.

The test antenna was mounted in the center of rotation of the turntable. The antenna and mounting structure were rotated clockwise while data was recorded in a counter clockwise direction. All feed cables to the antenna were secured and grounded during pattern measurements. A Hewlett Packard 8753A-network analyzer operating at 264.3 MHz was used as both the source and receiver. The level of the received signal was compared with a standard dipole to establish the directivity of the final pattern. The final pattern measured does not exceed the envelope pattern and is 90.4% of the envelope RMS.

The antenna is to be mounted in accordance with the supplied instructions and drawings. The antenna center of radiation approved in the construction permit is 147.6 ft. (45 meters) above ground level. The antenna is to be positioned 60 degrees true. It is recommended that a broadcast engineer is present to supervise the installation of the antenna and that he or she certifies the antenna has been installed according to the enclosed instructions.

General Specifications

Antenna Model	PSIFLV-2A-DA
Type	2-bay custom directional FM antenna
Polarization	Vertical/Mixed
Frequency	88.1 MHz
Gain (V-pol)	3.87 (5.88 dB)
Gain (H-pol)	.004 (-23.75 dB)
RMS (V-pol)	.700
RMS Envelope	.774
ERP (V-pol)	.78 kW (-1.08 dBk)
ERP (H-pol)	.001 kW (-30.0 dBk)
Input	7/8" EIA
Power rating	1500 Watts
Input power	.202 kW
Length	14.88 ft.
Weight	154 lbs.
Wind Area	9.71 sq-ft

Statement of Certification

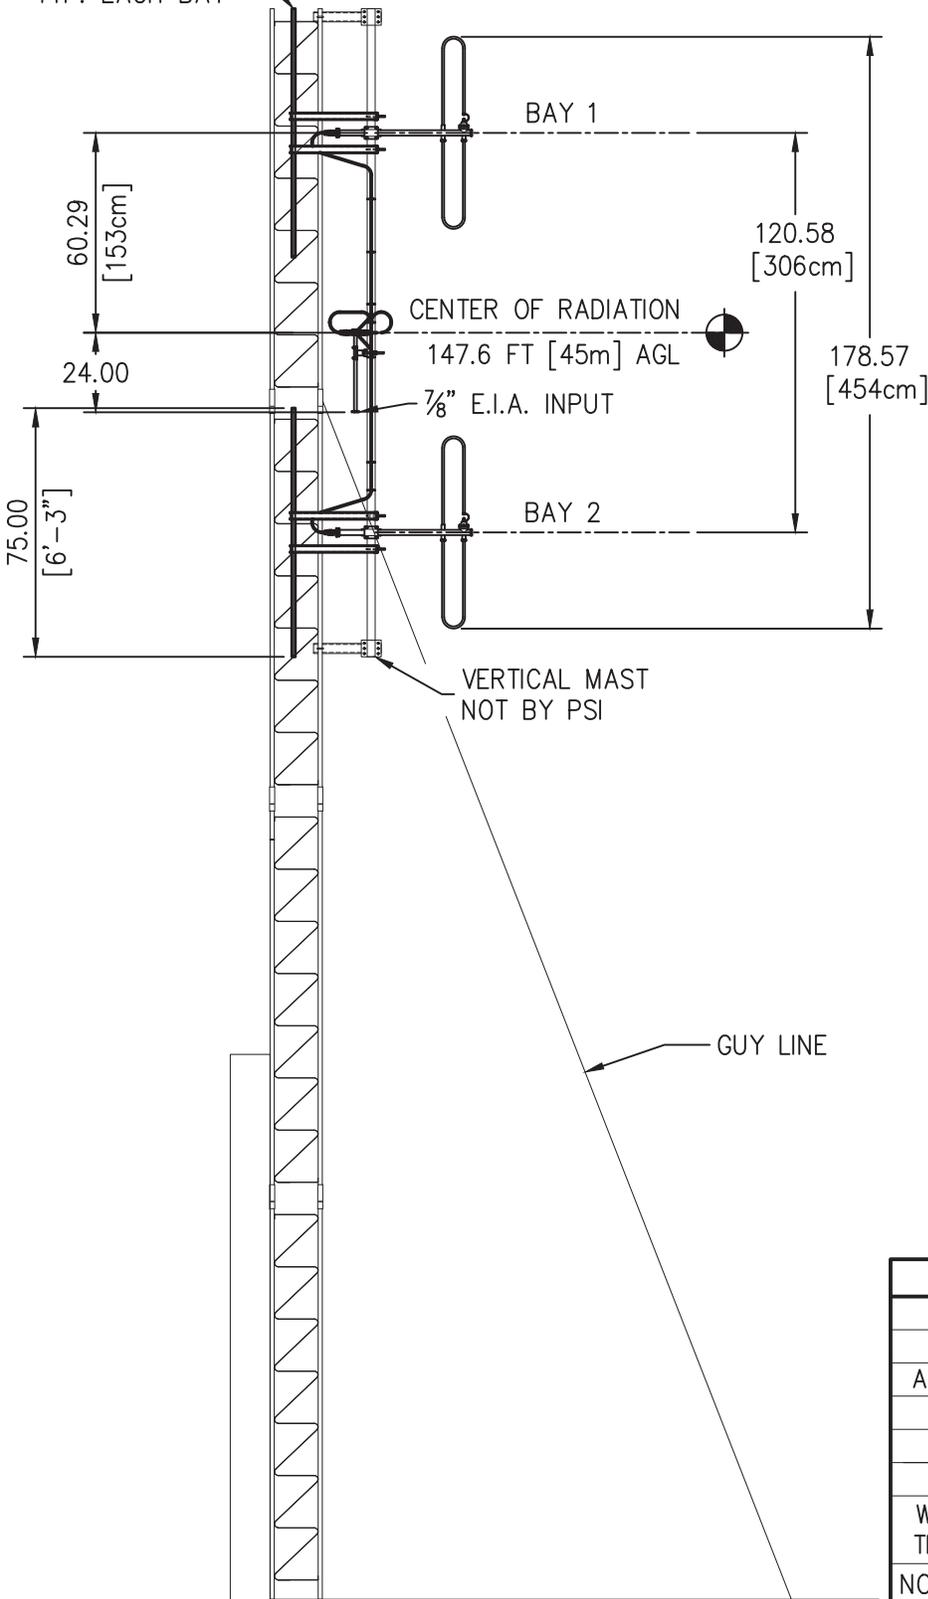

This is to certify the antenna has been designed, fabricated and tested under my supervision and it meets the required envelope pattern limitations set forth in the stations construction permit.

A handwritten signature in black ink, appearing to read "Douglas A. Ross".
