

## **EXHIBIT 29**

**ENVIRONMENTAL STATEMENT.** The proposed facility is located at a new electronic site on an tower with a height of 37 meters and will not come within any of the protected areas specified in Section 1.1307 (a) 1-8 and (b) of the Commission's Rules.

The proposed facility has a 95.0 KW horizontal ERP and 95.0 KW vertical ERP with a **10 bay 0.91 wave spaced** Shively 6810 antenna and a 21 meter AGL center of radiation. According to the Commission's **FM Model** program, the maximum level of RF radiation occurring anywhere on the ground is **72.5 uw/cm2** at 7.4 meters from the tower which is less than the maximum allowed in protected areas and less than that allowed in public areas. There are no AM, FM, TV or other RF sources at or near the site.

Because the proposed facility is compliant with the maximum RF radiation allowed anywhere on the ground, the applicant is not providing further study of the levels at the site. However, in an abundance of caution to protect the public and provide security for the site, the applicant will fence the base of the tower and post appropriate warning signs. Furthermore, the applicant will reduce power or cease operations as necessary to protect workers at the site from exposure to RF radiation in excess of Commission standards.
