

**Technical Statement  
In Support of  
Calvary Radio Network, Inc.  
W229AN**

**Request for STA to Rebroadcast WSTL(AM)**

This request is being filed simultaneously with a minor change application for a relocation of W229AN to the WSTL transmitter site.

This map below shows that the 60dbu f(50,50) contours of both the licensed and proposed facilities of W229AN fall within the WSTL 2mV/m contour of WSTL, and that the licensed and proposed locations are within 25 miles of the transmitter.

The proposed STA therefore meets the requirements for WSTL (AM) to be rebroadcast on this FM translator.

The above is true to the best of my knowledge and understanding.
