

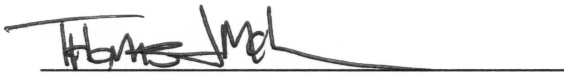

EXHIBIT 4
REQUEST FOR SPECIAL TEMPORARY AUTHORIZATION

KHYZ-FM is currently licensed to operate on channel 259 at an effective radiated power of 8.4 kW.

The main transmitter was struck by lightning via the power lines and suffered severe and broad damage. In order to continue service to the community, the licensee placed a backup transmitter on the air while repairs are being made to the main transmitter. The backup transmitter is only capable of generating an effective radiated power of 2.6 kW, or approximately 31% of the licensed power. The backup transmitter is using the licensed antenna system, thus the coverage does not extend beyond the station's licensed 54 dBu contour at any point.

The licensee requests Special Temporary Authorization to operate the facility at the above power level until such time as repairs can be completed on the main transmitter. Time to complete the repairs is not expected to exceed 180 days. The licensee will return the station to full licensed power at the earliest convenience.

Respectfully,

Thomas McNeill
Director Of Engineering
KHWY Inc.
