

### Statement Regarding AM Stations

The proposed operation of K67GJ will be located within 3.2 km of the following AM directional arrays:

KGNW	820 kHz	Burien-Seattle	Daytime
KGNW	820 kHz	Burien-Seattle	Nighttime
KJR	950 kHz	Seattle	Daytime
KJR	950 kHz	Seattle	Nighttime

Normally §73.1692 would require that the K67GJ licensee conduct “before” and “after” partial proof of performance measurements on these three facilities to establish that the AM array has not been adversely affected. In this particular case, such measurements should not be required.

Construction of the K67GJ facility proposed herein will involve only the replacement on the existing Adler USTA-16-S antenna with a new Scala 4DR-16-2HW antenna.

Therefore, the proposed construction is not expected to have any perceptible effect on the directional patterns of KGNW or KJR, and it is respectfully requested that the Commission not condition the K67GJ construction permit with respect to the AM stations.
