**MODIFICATION OF BLTTL20080509AAL**  
**TELEVISION TRANSLATOR STATION K34HK**  
**LONGVIEW, WASHINGTON**  
**CH 38, 1.20 KW-D, 37.8 MTR. AGL**

Grant of this application would not be considered a major environmental action. None of the conditions specified in Section 1.1307(A) of the rules are believed to apply. No change in tower location or height is proposed and the proposed modification will not result in any environmental impact. The overall tower structure, including all appurtenances, does not exceed 61 meters and, therefore, does not require an Antenna Registration Number.

The K34HK digital facility, operating on channel 38, was evaluated in terms of potential radio frequency (RF) energy exposure at ground level to workers and the general public. The radiation center for the antenna is located 37.8 meters above ground level. The proposed operation was evaluated using Far-Field Equation (1) on page 30 of Supplement A to OET Bulletin No. 65 (August 1997). The ERP utilized in the calculations was set to the maximum ERP value of 1.2 kW which is the total power radiated in the horizontal plane. A conservative elevation-plane antenna relative field value ["F" in Equation (1)] of 0.3 was utilized in the calculations. The maximum calculated power density at 2 meters (6.6 feet) above ground level is 0.0028 mW/cm<sup>2</sup> which is 0.14% of the FCC's recommended limit of 2.06 mW/cm<sup>2</sup> for an occupational/controlled environment and 0.68% of 0.41 mW/cm<sup>2</sup> for general public/uncontrolled exposure. The proposed operation is therefore categorically excluded from having to consider other facilities at the site.

In the event that workers or other authorized personnel climb the tower, appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure.
