

### Exhibit 10.1

I hereby certify the following statements:

I personally supervised the complete installation of the antenna (Shively 6810-5R-DA S.O. 30243) for WAUA and certify that it was side mounted on the pole on the top of the tower at the height prescribed by the manufacturer.

No other antenna is mounted within 10 feet in either the vertical or horizontal plane.

No other FM or TV broadcast antenna towers exist in the immediate vicinity.

The antenna is mounted on a newly constructed guyed tower. The installation is described fully in Exhibit 10.5. There are no AM towers located within 3.2 kilometers of the WAUA transmitter site.

I am the Engineering Manager for West Virginia Public Broadcasting's Charleston Division, and the Chief Designated Operator for the West Virginia Public Radio Network. I have been professionally employed as a broadcast engineer since 1987 by both commercial and non-commercial entities.
