

EXHIBIT 30 – 73.215 Contour Protection

Amendment to the Minor Change Application (BPH-20070118ACN) of Licensed Facility (8677)

WMYY (fm) 97.3 MHz ch. 247A

Schoharie, NY

Capital Media Corporation

26 March 2007

C.S. Fitch, P.E.

The existing transmitter site of WMYY (fm) is allocated under FCC rule 73.215, Contour Protection.

The instant primary application (BPH-20070118ACN) requests a slight adjustment in the station's antenna Center of Radiation (COR) Above Ground Level (AGL) position on the tower with corresponding adjustments in other elevation parameters. A slight reduction of Effective Radiated Power as a function of this small increase in height was also specified in the application.

However, the overall allocation circumstance of the station has not and will not change and although that was noted in the exhibits of the original application, a request for review under FCC 73.215 and for the continuation of WMYY (fm)'s 73.215 status was not formally specified in the application.

This modification of the instant application corrects that regulatory procedural error and formally requests the process of this application under contour protection rules and the continuation of 73.215 status for WMYY (fm).
