New 20' support, attached to church building at 21'9"', making 41'9" AGL.

The proposed facility is second adjacent to WZXL, a 38 kW facility less than 19 km distant. At 1 Watt ERP and 20 feet above the church roof, and using the proposed antenna, the attached spreadsheet shows that the interfering contour does not reach the ground. The attached aerial photo shows that there are no taller buildings than the church in the near vicinity. Hence no population can be in the area of interference and a no-population waiver is requested.
