

## EXHIBIT 31

### Environmental Protection

The proposed modification of KZRO FM, Dunsmuir, California requests to be co-located on an existing un-registered tower only 37 meters ( 120 feet ) tall, which is located in an established “antenna farm” on the top of Hatchet Mountain.

As per 47 C.F.R. Section 1.1306, note 3, the proposed transmitter location “will be categorically excluded” from environmental processing except for the RF requirements of Section 1.1307(b).

A complete study of all possible sources of RF energy, was performed prior to the filing of the instant relocation modification application. All known RF sources located on or near the proposed site, as listed in the FCC ULS and General Menu Files were included. They include the following FM Broadcast stations:

KNCA	209 C	19960417MD	50621	Burney, California
KRRX	291 C	19850626KH	41241	Burney, California
KKLC	300 C1	20070119AHG	60032	Fall River Mills, California

All prior studies done by the facilities in question show that the theoretical calculation is Not an appropriate method to use at this site. The applicant, Big Tree Communications, also agrees with their studies and findings, that theoretical calculations would give inaccurate results at best.

Accordingly, the applicant respectfully requests that the Commission grant the instant Construction Permit request with the condition that Big Tree Communications make RF measurements before constructing the proposed facility and submit the results of those measurements, along with the theoretical change caused by the addition of its antenna, prior to Commission grant of Program Test Authority.

If the results of those measurements and subsequent calculations reveal that there are areas that would exceed the requirements of OET 65 for controlled or uncontrolled access, Big Tree Communications will work with the site owners and other broadcasters to erect fencing and / or signs to fully comply with OET 65.

Further, after construction of the instant facility, Big Tree Communications will continue to Cooperate with all other users to reduce power or cease broadcasting as necessary to protect workers and others having access to the site from excessive levels of RF Radiation.
