WPEG(FM) FCC 302-FM Application
Section III Certification
Environmental
CBS Radio Holdings Inc.
April 30, 2009

An Environmental Assessment is not required, as grant of this application would not be considered a major environmental action. The antenna will be installed on an existing tower structure.

The applicant proposes to utilize a shared Dielectric model DCR-M3E5. This is a 3 bay, half wave length spaced side mounted antenna. The center of radiation will be 144 meters above ground level with an effective radiated power of 1 kW H & V. CBS owned WNKS has a license application on file to use the above named antenna as a permissive replacement for its authorized auxiliary. CBS intends to utilize a switching arrangement whereby WNKS or others can separately use the antenna. No combined operation is proposed. CBS stations WBAV-FM, WSOC-FM, and WKQC are concurrently filing construction permit applications to use the proposed antenna as auxiliaries.

The proposed transmitting facilities will comply with the FCC guidelines limiting human exposure to radio frequency energy. The maximum power density level at ground level, calculated in accordance with OET Bulletin No. 65 (August 1997), is less than 1% of the applicable limit for exposures to the general public (Un-controlled environment). Accordingly, the proposed facility is categorically excluded by FCC Rules from having to consider the contributions of other stations at the site. If work is done on the tower in an area where over exposure could occur, the Licensee in coordination with the other users will take necessary action to prevent the overexposure of workers on the tower including reducing the transmitting power or ceasing operation completely.
