APPLICATION FOR DTV CONSTRUCTION PERMIT
STATION WRNN-DT
FACILITY ID: 98016
KINGSTON, NEW YORK
CH 48 950 KW (MAX-DA) 378 M

Technical Narrative

This Technical Exhibit supports an application for television (TV) station WRNN-TV on NTSC (analog) channel 62 at Kingston, New York. This application requests a construction permit (CP) for a digital television (DTV) operation on channel 48 at Kingston. In MM Docket No. 00-121, RM-9674, the FCC allotted channel 48 for WRNN-TV's DTV operation in place of channel 21. The FCC assigned a directional effective radiated power (ERP) of 200 kilowatts (kW) and an antenna radiation center height above average terrain (HAAT) of 388 meters for the DTV allotment.

Station WRNN-TV proposes to operate DTV channel 48 at the following site location (41-29-18 N, 73-56-56 W). It is proposed to operate with an Andrew ATW25H3-HTCX-48H "cardioid" type directional antenna with a maximum ERP of 950 kilowatts and an HAAT of 378 meters. These facilities exceed those allotted in MM Docket No. 00-121, RM-9674, therefore the application is not considered a "checklist application".

A sketch of antenna and pertinent elevations are included as Figure 1. The FCC antenna registration number for the existing tower is 1064695. It is proposed to increase the overall height of the existing tower from 90

du Treil, Lundin & Rackley, Inc.

Consulting Engineers

Page 2

Kingston, New York

meters (295 feet) to 100 meters (328 feet) above ground level. The FAA has been notified of the proposed increase in height, and once a Determination of No Hazard has been issued, the FCC registration will be revised to reflect the proposed height increase.

Figure 2 is data for the proposed Andrew ATW-25H3-HTCX-48H directional antenna. A graph and tabulation of both the horizontal and vertical antenna patterns are included.

AM station WBNR on 1260 kHz at Beacon, New York is the only no known authorized full service AM stations within 5 kilometers (3 miles) of the WRNN-DT transmitter site. The following is a list of those authorized FM and full service TV stations within 16 kilometers (10 miles) of the proposed DTV site. Although no adverse electromagnetic impact is expected, the applicant recognizes its responsibility to correct problems which are a result of its proposed DTV operation.

<u>Station</u>	<u>Channel</u>	<u>Bearing (°True)</u>	<u>Distance (km)</u>
WGNY-FM, Newburgh, NY	276A	264	16.0
WSPK, Poughkeepsie, NY	284B	72	0.1
WTBY, Poughkeepsie, NY (DTV CP)	27	20	0.1

The proposed transmitter site is 333 kilometers from the closest point of the Canadian border. Therefore, if necessary coordination with Canada is respectfully requested.

The proposed DTV site is more than 2500 kilometers from the closest point of the Mexican border. The closest FCC monitoring station is at Canandaigua, New

York, approximately 316 kilometers to the northwest. The proposed DTV site is outside the National Radio Quiet Zone (VA/WVA), the closest point being more than 450 kilometers to the southwest. The closest point of the Table Mountain Radio Quiet Zone (CO) is more than 2600 kilometers to the west. The closest radio astronomy site operating on TV channel 37 is at Hancock, New Hampshire over 225 kilometers to the northeast. These separations are sufficient to not be a concern for coordination purposes.

Figure 3 is a map showing the DTV predicted coverage contours. The map provides the predicted 41 dB_u f(50,90) noise limited contour and the 48 dB_u f(50,90) city coverage contour. The extent of the contours has been calculated using the normal FCC prediction method, except the proposed HAAT was calculated based on 36 evenly spaced radials rather than eight. The Kingston city limits were derived from information contained in the 2000 U.S. Census for New York. As shown, the 48 dB_u contour encompasses the entire city limits of Kingston.

Figure 4 is a DTV channel 48 separation study toward other NTSC and DTV allotments based on a 161 kilometer "buffer". Although the separation requirements are only applicable to new DTV allotments, they can be used as an indication of which stations have the potential of receiving interference from the proposed channel 48 DTV operation.

An interference analysis has been conducted using the procedures outlined in the FCC's OET-69 bulletin and employing a 2 kilometer grid. Results of the analysis indicate that the proposal complies with the interference

du Treil, Lundin & Rackley, Inc.

Consulting Engineers

Page 4

Kingston, New York

protection provisions of Section 73.623(c)(2).¹

Interference calculations for the proposed WRNN-DT operation are summarized below. It is noted that the summary only includes stations with which interference is calculated.

<u>Station</u>	<u>Channel</u>	FCC Service <u>Population</u>	Prop. DTV <u>Population</u>
WXTV (CP), Paterson, NJ	NTSC-41	16,839,622	49 (0.00%)
WYDN-DT, Worcester, MA	DTV-47	3,875,127	93 (0.00%)
WNJU(CP), Linden, NJ	NTSC-47	17,622,974	6,745 (0.04%)
WNJU(LIC), Linden, NJ	NTSC-47	17,049,621	15,709 (0.09%)
WNJU(APP), Linden, NJ	NTSC-47	17,108,503	2,723 (0.02%)
WRC-DT, Washington, DC	DTV-48	6,541,255	0 (0.00%)
WYDN(CP), Worcester, MA	NTSC-48	3,213,293	794 (0.03%)
WYDN(LIC), Worcester, MA	NTSC-48	1,617,500	402 (0.03%)
WGTW(LIC), Burlington, NJ	NTSC-48	7,010,431	28,603 (0.41%)
WYDC(LIC), Corning, NY	NTSC-48	144,781	24 (0.02%)
WYDC(APP), Corning, NY	NTSC-48	264,772	639 (0.24%)
WEDW(LIC), Bridgeport, CT	NTSC-49	3,822,554	17,139 (0.45%)
WNJN(CP), Montclair, NJ	NTSC-50	16,018,357	1,977 (0.01%)
WNJN(LIC), Montclair, NJ	NTSC-50	15,353,734	563 (0.00%)

From the above, it is apparent that the proposed WRNN-DT operation on channel 48 complies with the FCC's 2%/10% interference standard toward all authorized analog and DTV assignments.

The proposed WRNN-DT operation was also studied to determine its potential impact on Class A LPTV stations. Based on our analysis the proposed operation will not adversely affect any Class A LPTV stations.

¹ The duTreil, Lundin & Rackley, Inc. DTV interference analysis program is based on the program and procedures outlined by the FCC in the Sixth Report and Order; subsequent Memorandum Opinion and Order; and FCC OET Bulletin No. 69. A nominal grid size resolution of 2 km was employed. An Alpha based processor computer system was employed.

The proposed WRNN-DT facilities were evaluated in terms of potential radio frequency (RF) energy exposure at ground level to workers and the general public. The radiation center for the WRNN-DT antenna is located 93 meters above ground level. The maximum DTV ERP is 950 kW. A relative field value of 0.05 is presumed for the antenna's downward radiation (see Sheet 4 of Figure 2). The calculated power density at two meters above ground level is 0.0096 mW/cm². This is 2.1% of the FCC's recommended limit of 0.45 mW/cm² for channel 48 for an "uncontrolled" environment. Therefore, based on the responsibility threshold of 5%, the proposal will comply with the new RF emission rules.

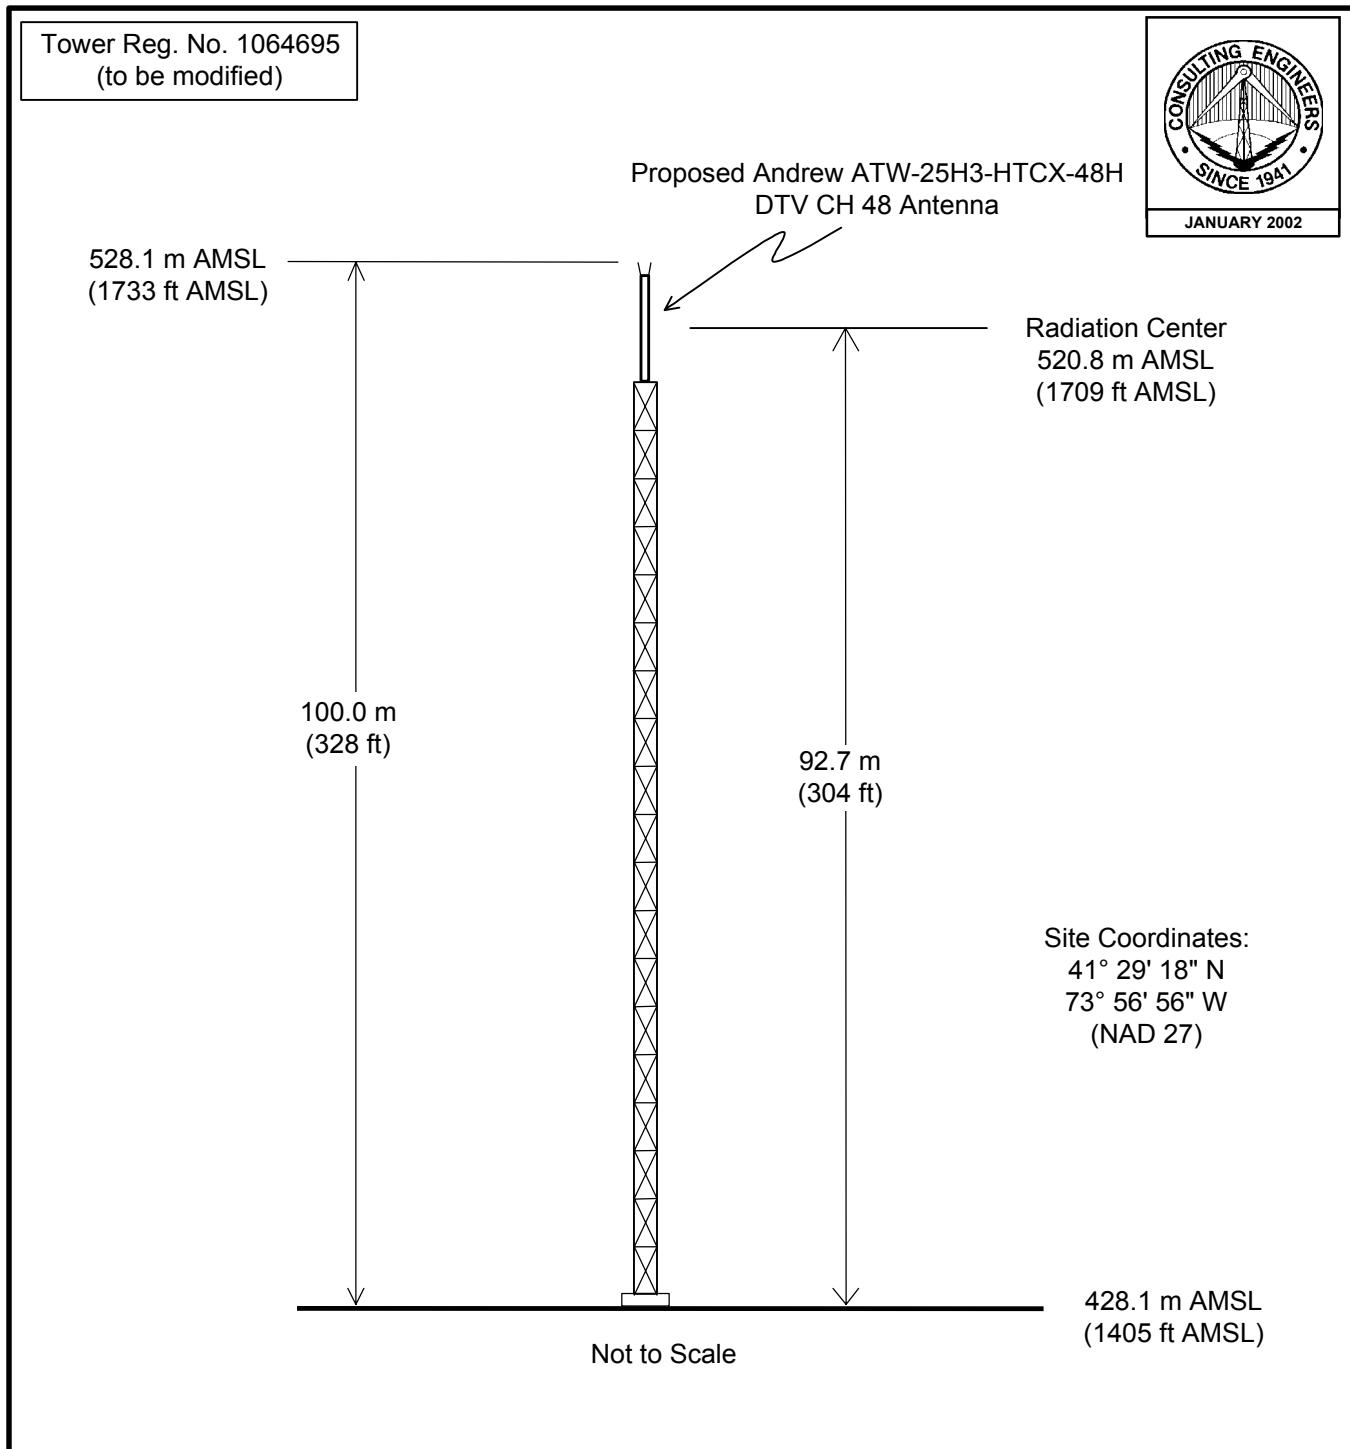

Access to the transmitting site will be restricted and appropriately marked with warning signs. As this is a multi-user site, an agreement will control access to the site. In the event that workers or other authorized personnel enter restricted areas or climb the tower, appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing "accepted" RFR protective clothing and/or RFR exposure monitors or scheduling work when the stations are at reduced power or shut down. The proposed WRNN-DT operation appears to be otherwise categorically excluded from environmental processing.
