ENGINEERING STATEMENT

The engineering data contained herein have been prepared on behalf of TRINITY BROADCASTING NETWORK, licensee of television translator K61HD, Channel 61 in Davenport, Iowa, in support of this Application for Construction Permit to specify operation on Channel 44 from the licensed K61HD site. This proposal is being submitted in response to the Commission's reclamation of Channel 61 spectrum for future auction, thereby placing this translator in a displacement situation.

It is proposed to mount a standard Andrew directional antenna at the authorized height on the side of an existing 168-meter communications tower. Exhibit B is a map upon which the predicted service contours are plotted. It is important to note that the newly proposed 74 dBu contour encompasses a significant portion of that which obtains from the licensed K61HD facility. Operating parameters for the proposed facility are tabulated in Exhibit C. A contour overlap analysis and interference study are provided in Exhibit D, and a power density calculation follows as Exhibit E.

Because no change in the overall height or location of the existing tower is proposed, the FAA has not been notified of this application. The FCC issued Antenna Structure Registration Number 1035416 to this tower.

I declare under penalty of perjury that the foregoing statements and the attached exhibits, which were prepared by me or under my immediate supervision, are true and correct to the best of my knowledge and belief.

A handwritten signature in dark ink, appearing to read 'K.T. Fisher', is written over the signature line.

PROPOSED OPERATING PARAMETERS

PROPOSED K61HD
CHANNEL 44 – DAVENPORT, IOWA

Transmitter Power Output:	2.0 kw
Transmission Line Efficiency:	44.6%
Antenna Power Gain – Toward Horizon:	22.42
Antenna Power Gain – Main Lobe:	28.2
Effective Radiated Power – Toward Horizon:	20.0 kw
Effective Radiated Power – Main Lobe:	25.2 kw
Transmitter Make and Model:	Type-accepted
Rated Output	2.0 kw
Transmission Line Make and Model:	Andrew LDF7-50A
Size and Type:	1-5/8" air heliax
Length:	550 feet
Antenna Make and Model:	Andrew ALP16L2-HSOC
Orientation	225 degrees true
Beam Tilt	0.75 degrees
Effective Height Above Ground:	165 meters
Effective Height Above Mean Sea Level:	369 meters
