RF Exposure Statement
W42DJ-D Displacement Channel 20
Ocala, FL

An evaluation of the proposed facility has been made and it has been determined that the requirements of 47 CFR section 1.1310 have been met including the exposure to radio frequency radiation by either the general public or workers at the station.

The location of the transmitting equipment will be situated so that the general public will not have access to areas where radio frequency radiation would be at or in excess of the level that is considered harmful. Workers at the facility will be protected by coordination and cooperation with the users of the facility and power reductions will be made as needed to insure a safe workplace.
