

Exhibit 11 for Sandpoint LPFM frequency change

Sandpoint Christian Broadcasting Corp received a construction permit for a new LPFM at Sandpoint Idaho for facility ID 195757 on channel 247/97.3 FM. The applicant recently discovered that there is a substantial signal reaching Sandpoint from co-channel KKRS Davenport, WA. Although the proposed LPFM is well out of the protected contour of KKRS and is fully spaced as per the commission's rules with regards to spacing between LPFM and the KKRS C3 facility, the applicant does not wish to inflict interference on KKRS in and around Sandpoint, nor does it want the LPFM's coverage area to be impeded by KKRS's signal. Therefore, the applicant respectfully requests a minor change to the second adjacent channel of 249/97.7 FM.

Channel 249 is fully spaced to all other existing FM stations, applications and permits at the time of this filing.

ComStudy 2.2 search of channel 249 (97.7 MHz Class LP100) at 48-16-15.0 N, 116-34-40.0 W.
