

## Exhibit 9, Special Conditions

### Condition # 1

This condition requires spurious emissions measurements with all stations using this antenna transmitting. Measurements were not taken. This antenna will be the auxiliary antenna for four stations commonly owned by the parent corporation Infinity Broadcasting. This installation does not use a combiner as there is only one frequency agile 10 Kw transmitter at the site. Only one station will use the antenna at any time.

### Condition # 2

This condition requires antenna impedance measurements to be taken by AM Station KCKN.

The FM antenna installed on the KCKN (AM) tower was previously installed and licensed by FM station KFKF-FM. The only change made to the system during this project was to replace the existing transmitter with a frequency agile transmitter that could be used by any one of the four stations licensed to use this as an auxiliary facility. Since changes were not made that would affect the operation of KCKN (AM), measurements were not made.

### Condition # 5

This condition requires a statement certifying a fence has been constructed around tower base.

As is required by 73.49, AM Transmission System Fencing Requirements, Operator of Am station constructed a tower base fence after the tower was built. The operator of the AM station continues to maintain that fence.
