Grants Pass, OR. 97528

August 18, 2009,

In evaluating the proposed digital flash cut for K29GX FID 5009, an outgoing interference study was executed on the proposed design in the attached application using the OET-69 Longley Rice methodology. The stations listed in the table below showed possible interference. When these stations were evaluated for outgoing interference, there was zero percent interference present. This was found in each case when rounded to the nearest whole percent.

Callsign	Fac ID	ARN	City	Class	New Pop%
